G. O. P. E. I.  
011 Anniversary  
1972-2013

- A minimum distance of 800 m from any dwelling, school or other educational, religious, camping or health facility.

The plant shall, among other things, respect the following requirements:

- The plant will only use liquid or gaseous fossil fuels other than waste oil;
- The plant, as well as any place of loading, unloading or depositing of the aggregates and any sedimentation pond used for the purposes of such a plant, will not be located in a stream of regular or intermittent flow, lake, pond, marsh, swamp or bog;
- The plant will not use residual materials in its process, except for dust recovered from a dust collector;
- There are no other bituminous concrete plants within a radius of 800 m.

Where the bituminous concrete plant is located on Category 2 lands, the Contractor will also be required to submit a Declaration of Compliance to the Minister of Sustainable Development, Environment and Fight Against Climate change at least 30 days before establishing the plant.

In addition, Section E of the Specification specifies the following requirements:

#### **12.0 PROTECTION OF THE ENVIRONMENT**

*Old and non-reusable equipment pieces, used tires, empty containers and waste liquids must be removed from the area and disposed of, according to regulations in force; they must never be burned on site*

*Maintenance and repair of equipment must be done in suitably designated locations; any temporary location must allow for recycling of used oils or any other contaminant; these locations must be located at least 150 meters away from any streams or rivers.*

*Exhaust systems of all vehicles or equipment being used for construction must be in good order of repair so they will not disturb residents unduly.*

*Fuel depots or other oil products must be located in areas far enough away so as not to endanger any human life in case of deflagration; as well they must be located at least 60 meters away from any streams or rivers.*

*Deforestation can only be done with authorized mechanical methods. The use of herbicides is forbidden.*

G. 1976

*Permission must be obtained from the assignor or occupier, before cutting fences. Pickets must be braced on each side of the right-of-way, so as to maintain the same tension in the remaining sections.*

*When the works are ended, the Contractor has to remove from the right-of-way, not only his materials but also the unused, the waste and rubbishes, pebbles and rock, fragment of wood, stumps, roots; clean the places of materials and equipment's; put back in good condition ditches and streams which he blocked; repair or reconstruct fences and other necessary works which he demolished or damaged and to have all the removed materials by transporting them out of the right-of-way and it not so as to spoil the neighborhoods of the works or the related works; the whole to the satisfaction of the engineer. Finally, he has to repair all other damages he caused on the site of the works, in the public or private property caused by his operations, in plans of water, in sites of camp and storage of the material, the storing or the supply of materials, to the environment and/or to the agricultural territory.*

### **36.0 CLEANING**

*When the work is completed, the Contractor shall remove on the right of way corridor not only their equipment but unused materials, waste and scrap, rocks and stones, woody debris, stumps, roots, clean the locations of materials and tools, repair damaged ditches and streams that he obstructed, repair or rebuild fences and other works necessary he demolished or damaged and have all the materials removed by carrying out right of way and that so as not to disfigure the edges of the work or related works, all to the satisfaction of the Engineer. Finally, he must repair all other damages or damage it has caused on the site of the work, to public or private property affected by its operations, water bodies, the camp site and storage of materials, storage or supply of materials, environmental and / or agricultural land. It should also proceed with the restoration of forest cover on forest land in the public domain.*

It should also be noted that the construction work will be under the constant supervision of SNC Lavalin, which will ensure that the contractor is in compliance with the regulatory requirements and the specifications requirements throughout the work.
