1.0 PROJECT PROPOSER

Name of applicant:	Osisko Mining Inc.
Address:	155, University Avenue, Suite 1440 Toronto (Ontario) M5H 3B7
Telephone:	416 848-9504
Fax:	416 363-9813
Website:	www.osiskomining.com
Authorized representative:	Ms. Alexandra Drapack, P.Eng.(Ontario), MBA Vice President Environment Services & Sustainable Development
Email:	adrapack@osiskomining.com

Québec business number

The number for Osisko Mining Inc. recorded in the *Centre informatique du registre des entreprises du Québec*, assigned by the *Registre des entreprises* is 1172033616.

Authorized signatory

A resolution of the board of directors authorizes Ms. Alexandra Drapack, Vice President Environment Services & Sustainable Development, to act on behalf of the organization. The resolution is presented in Appendix A.

2.0 NAME OF THE PROJECT

Bulk Sampling – Windfall Lake Project

3.0 LOCATION OF PROJECT AND MINING PROPERTY

Location

The Windfall Lake Property is in the Nord-du-Québec administrative region, less than 10 kilometres north of the border with the Abitibi-Témiscamingue region. The property lies on land of the municipality of Eeyou Istchee James Bay Regional Government, more specifically in the Urban Township. The Windfall Lake exploration camp and ramp portal area is 115 kilometres from Lebel-sur-Quévillon and accessible by forestry roads (road 1000 to kilometre 12, road 5000 to kilometre 66, and road 6000 to kilometre 112 – Windfall Lake). It is also possible to reach the site from Chapais by a series of forestry roads (151 kilometres). The geographic coordinates of the Windfall Lake site are as follows (property centre):

- Latitude north (NAD 83): 49° 04' 14"
- Longitude west (NAD 83): 75° 39' 00"

The Windfall Lake Property lies in a remote area dominated by mining and forestry activities. Map 1 shows the general location of the exploration site.

Mining Property

The Windfall Lake property currently consists of 285 claims covering approximately 12,467 hectares and the claim holder is Eagle Hill Exploration Corporation (Eagle Hill), a wholly owned subsidiary of Osisko Mining Inc. (Osisko Mining). Operations related to bulk sampling will be carried out on the following claims:

Ramp portal area

- 2379373
- 2379374
- 2376883
- 2376889
- 2376861
- 2376862
- 2376866

Claims are shown on Map 2.

4.0 PROJECT DESCRIPTION – OBJECTIVES AND JUSTIFICATION

Permitting Background

In 2007, Noront Resources Ltd (Noront) obtained the necessary authorizations to proceed with the bulk sampling of 44,500 tonnes of ore at the Windfall Lake site. According to the various applications prepared at the time by Genivar on behalf of Noront, the bulk sampling work was to involve driving a ramp that would generate 157,800 tonnes of waste rock and 23,500 m³ tonnes of overburden. Noront obtained the following authorizations:

- Attestation of exemption from the environmental and social impact assessment and review procedure stipulated in Chapter II of the Environment Quality Act (EQA) for a bulk sampling program at the Windfall Lake site, issued to Noront on December 3, 2007.
- Certificate of authorization from the MDDELCC pursuant to section 22 of the EQA to extract a bulk sample of 44,500 tonnes of ore at the Windfall Lake site (7610-10-01-70090-20 / 200178172), issued on September 18, 2007.
- Authorization from the MERN pursuant to section 69 of the Mining Act to extract a bulk sample of 25,000 tonnes of ore at the Windfall Lake site, issued on October 10, 2007.

Noront started ramp advancement in February 2008, but prematurely suspended all activities in October of that same year before completing the planned work.

In 2017, Osisko Mining undertook steps to continue the bulk sampling work started by Noront. The following authorizations have been obtained:

- Attestation of exemption from the environmental and social milieu impact assessment and review procedure stipulated under Chapter II of the Environment Quality Act (EQA), for the completion of the bulk sampling program started and suspended by Noront in 2008, issued October 10, 2017.
- Transfer of the certificate of authorization (7610-10-01-70090-20 / 200178172) issued under section 22 of the EQA for Noront to collect a bulk sample at the Windfall Lake site to Osisko Mining, authorized by the MDDELCC on March 17, 2017.
- Certificate of authorization (7610-10-01-70090-22 / 401598242) issued under section 22 of the EQA to treat water generated by initial dewatering of the ramp and on-going dewatering during ramp extension and bulk sample extraction, obtained on May 25, 2017.
- MERN autorisation under section 69 of the Mining Act to extract a bulk sample of 5,000 tonnes of ore at the Windfall Lake site from the Caribou and 27 zones, issued on October 16, 2017.

The collection of a 5,500 tonnes bulk sample in Zone 27 of the Windfall Lake deposit was completed in the fall of 2018. Transportation of the first portion of the sample was done between October 31st and December 5th, 2018 followed by processing that took place between December 3rd and 8th, 2018. The second portion was transported between January 29th and March 13th, 2019 and was processed between May 12 to 16, 2019. Processing was done at the Northern Sun Mining Redstone Mill in South Porcupine, Ontario.

At the end of 2017, Osisko Mining wanted to pursue exploration through the advancement of the exploration ramp towards the Lynx and Underdog zones in order to take a 5,000 tonnes bulk sample in each zone. At the time, the Lynx zone had just been discovered and presented great potential. Osisko Mining therefore presented all necessary requests and obtain the following authorizations:

- Attestation of exemption from the environmental and social milieu impact assessment and review procedure stipulated under Chapter II of the Environment Quality Act (EQA) issued June 20, 2018, to undertake a bulk sampling program in the Underdog and Lynx zones.
- Certificate of authorization (7610-10-01-70090-27 / 401726560) issued under section 22 of the EQA to take bulk samples of the Lynx and Underdog zones and expand the waste rock stockpile, obtained on August 6, 2018.
- MERN authorization issued on December 18th, 2018 under section 69 of the Mining Act to extract two bulk samples of 5,000 tonnes of ore each at the Windfall Lake site Lynx and Underdog zones.

The collection of a 5,000 tonnes bulk sample in the Lynx zone was completed in September 2019. Transportation of the sample was completed on October 31, 2019 and will be followed by processing at the Northern Sun Mining Redstone Mill in South Porcupine, Ontario.

Throughout the above, the closure plan of the Windfall Lake Project was updated to reflect the changes to the infrastructure. The following table shows the dates of the closure plan, the updates, addenda and associated financial assurance.

Table 1: Closure Plan, Updates, Addenda and Associated Financial Assurance

OWNER	DATE SUBMITTED	DATE ACCEPTED	FINANCIAL ASSURANCE	COMMENTS
Noront	August 2007	September 2008	\$385,046	Initial closure plan
Eagle Hill	November 2012	June 2014	\$570,000	5-year update
Osisko	July 2017	June 2018	\$2,814,505	5-year update
Osisko	December 2018	November 2019	\$3,512,850	Addenda expansion lined stockpile.

The main components of the closure plan include:

- Blocking the portal with rockfill and preventing access to ventilation shafts using reinforced concrete slabs;
- Dismantling all buildings and infrastructure, breaking apart and backfilling all concrete slabs, and scarifying and revegetating footprints;
- Covering the material on the lined stockpile with a membrane to limit water contact and oxidation within the stockpile;
- Reclamation of the unlined pad;
- Removing membranes and levelling the ditches, sedimentation and polishing ponds. Excavating sludge accumulated in the Geotube™ as well as sludge in the ponds and disposing underground;
- Characterizing soils as required by regulations, and land rehabilitation if the characterization study reveals the presence of contaminants above the regulatory criteria.

5.0 EXPLORATION BACKGROUND

Osisko Mining commenced exploration drilling on the Windfall Lake Project in 2015 with an initial 50,000 m drilling program. The program was subsequently increased several times over the years to its current 1,000,000 m program. The goals of the drilling program are to consolidate existing mineral resources, to expand known mineralized zones and to discover additional zones.

In the initial drill program, all drilling was performed from the surface. Following dewatering and rehabilitation of the existing ramp, underground drill rigs were added in 2018 to allow better definition of the areas targeted for the bulk samples in Zone 27 and in the Lynx Zone. Currently, there are currently 22 drill rigs drilling from surface and two underground drills active on the project.

In 2018, Osisko Mining released the Osborne-Bell Resource Estimate for the Osborne-Bell gold deposit, located 15 kilometres northwest of Lebel-sur-Quéillon, Québec. This estimate is the result of 927 drill holes (279,925 metres) completed since 1994 by previous operators, including 50 completed after a resource estimate published in 2012, and four new drill holes completed by Osisko Mining in December 2017.

Osisko Mining also filed the Windfall Lake Mineral Estimate, the result of 1,453 drill holes (596,733 metres) completed by previous operators since 1997 and 812 new drill holes (413,692 metres) completed by Osisko Mining from October 2015 to March 2018.

At the end of 2018, Osisko Mining released the Updated Lynx Zone Resource Estimate. This updated mineral resource estimate includes 138 infill drill holes (107,366 metres) completed in the Lynx Zone between March 6, 2018 and October 27, 2018.

Table 2 shows the results of the Windfall Lake Mineral Resource Estimate (effective date of May 14, 2018) including the Updated Lynx Zone Resource Estimate (effective date of November 27, 2018) and the Osborne-Bell Resource Estimate (effective date of March 2, 2018).

Table 2: Windfall Lake and Osborne-Bell Resource Estimate*

	Indicated			Inferred		
	Tons	Au(g/t)	Au(oz)	Tons	Au(g/t)	Au(oz)
Lynx	1,746,000	8.13	456,000	2,005,000	9.70	625,000
Zone 27	628,000	8.69	175,000	852,000	7.28	199,000
Caribou	318,000	7.12	73,000	2,767,000	5.80	516,000
Underdog	147,000	9.00	43,000	4,380,000	6.77	953,000
Other	34,000	6.58	7,000	348,000	6.37	71,000
Osborne-Bell				2,587,000	6.13	510,000
Total	2,874,000	8.17	754,000	12,939,000	6.91	2,876,000

*See Windfall Lake and Osborne-Bell Resource Estimate notes and Updated Lynx Zone Resource Estimate notes in Appendix B.

Based on these resource estimates, Osisko Mining filed a Preliminary Economic Assessment (PEA) of the Windfall Lake Project on June 12, 2018. The positive results of the PEA encouraged Osisko Mining to initiate the work required on the Windfall Lake Project to move towards the next phase of study, namely converting more of the Inferred resources into the Indicated category for inclusion in a Feasibility Study. This requires a significant amount of additional drilling, hence the increase to a 1,000,000 m program. Since the database closed in March 2018 to complete the PEA, a total of 395,000 m of additional drilling has been completed, totalling more than 900,000 m on the project to date. Not only did the additional drilling allow for a better understanding of the deposit, it also generated several new discoveries.

Osisko Mining made several new discoveries during 2019: Windfall North, Fox SW, Lynx Extension, and Triple Lynx. Of these, the discovery of Triple Lynx in July 2019 was the most significant. Since Triple Lynx is significantly closer to surface than the mineralization in the Underdog Zone, Osisko Mining decided to postpone the advancement of the exploration ramp towards Underdog to focus on this new discovery with more than 30,000 m in drilling into that zone.

Results to date from surface drilling into Triple Lynx discovery highlighted the importance of this portion of the deposit. Triple Lynx is close in proximity to the Main Lynx zone, thus increasing the centre of gravity of the deposit; it is closer to surface than Underdog and has promising gold grades. For these reasons, understanding Triple Lynx is crucial to the Feasibility for the Windfall Lake Project.

6.0 BULK SAMPLING REQUEST

Context

When Osisko Mining acquired the Windfall Lake Project in 2015, the mineral resource only included the mineralization of Zone Caribou/27. Based on surface drilling completed during 2015-2017, Osisko Mining realized that mineralization was present in 3 different zones: Caribou/27, Lynx and Underdog. Subsequently, Osisko Mining wanted to pursue exploration through the advancement of the exploration ramp towards the Lynx and Underdog zones in order to take a 5,000 tonnes bulk sample in each zone. At that time, the distribution of tonnages was believed to be approximately 1/3, 1/3, 1/3 between the zones. Additional drilling in 2018 and 2019 have highlighted the importance of Lynx as the centre of gravity of the deposit. The following table shows the changes in tonnage distribution between April 2018 and October 2019.

Table 3: Tonnage Distribution by Zones

ZONES	% TOTAL TONNAGE APRIL 2018	% TOTAL TONNAGE OCTOBER 2019
Caribou/27	33.3%	15%
Lynx	33.3%	50%
Underdog	33.3%	35%

Our original estimate of the distribution did not account for the Triple Lynx Discovery, Lynx Extension and continuous exploration success in the Lynx area. These new discoveries combined with the fact that results from the Lynx area display higher gold grades than other sectors of the deposit lead us to estimate a significant increase in contribution from the Lynx sector of the deposit when compared with the rest of the deposit.

Moreover, the new Triple Lynx zone is located closer to surface, within vertical depths between 400 m and 800 m. This makes it more attractive in the Feasibility Study because it will be faster and cheaper to access than deeper sectors of the deposit. Mineralization closer to surface requires less development to access them and therefore improves the feasibility of the project.

Therefore, to better reflect the significant increase of Lynx's contribution to the deposit, Osisko Mining wishes to postpone the collection of the Underdog bulk sample by a sample to be taken in the top portion of Triple Lynx.

Objectives and Justification

The goal of exploration at the Windfall Lake Project is to define Indicated resources for inclusion in a Feasibility Study. The justification presented in the previous request for bulk samples from the Lynx and Underdog zones is still valid and pertinent for Triple Lynx; namely to gain an understanding of Windfall Lake's geological uniqueness, the complexity of the mineralization and the nugget effect.

Triple Lynx mineralization is hosted within an ultramafic rock whereas the bulk sample collected from Lynx in 2019 was hosted within a felsic volcanic rock. This difference is significant and has implications on mine design and mineral processing of the ore during the Feasibility Study, as follows:

- In terms of rock mechanics, behaviour of ultramafic rock and felsic volcanic rock is different (ductile vs brittle), information from the bulk will be valuable. In addition, fault geometry and orientation will be validated within the openings of the exploration ramp.
- Geometry of mineralization is influenced by the host rock (felsic vs ultramafic). It is therefore difficult to proceed with geological modeling and extrapolate from data obtained from the Lynx bulk (felsic rock) to ultramafic.
- Host rock type also influences gold recovery. Parameters such as rock hardness can have a significant impact on crushing and consequently on mill design during the Feasibility Study. A softer rock, such as an ultramafic rock, can be easier to crush but could result in challenges while generating more fines.

Drilling for the Exploration Ramp

As the project advances and the deposit continues at depth, several challenges emerge from relying solely on surface drilling. The exploration ramp represents a significant advantage by allowing drilling from underground. As the exploration ramp is advanced to collect a bulk sample from the Triple Lynx sector, installation of drill bays from the ramp will allow exploration drilling from underground into Lynx and Triple Lynx. Underground exploration drilling from the ramp reduces the length of drill holes and reduces drill hole deviation. Presently, an important part of the exploration program is focused on “infill drilling” – drilling between existing drill holes. Specifically, closer drill hole spacing is required to convert Inferred reserves to Indicated reserves for the Feasibility Study. Underground access would favourably decrease the spacing between drill holes. Finally, it allows drilling of the deposit at depth which is challenging from surface since Lynx cannot be drilled from the south due to the presence of a lake and wet land. Underground drilling would therefore limit potential impacts at surface.

Relative Size of the Bulk Sample

Overall, if the current request is authorized, the total amount of ore that will be extracted from Windfall Lake for bulk sampling could total 20,000 tonnes. From the PEA, the total tonnage of the proposed Windfall Lake Project is 8.9 Mt over 8.1 years and the bulk sample only represents 0.2% of the total tonnage or less than a week of mining.

7.0 LEARNING FROM BULK SAMPLE AND UNDERGROUND ACCESS

A bulk sample allows the acquisition of information on geology, structure, metallurgy, geotechnical, mining, water management, waste rock management, and mineral processing. Here's a summary of what we have learned from bulk sampling in both Zone 27 and Lynx.

Geology and Structure

The mineralization of the Windfall Lake deposit is composed of several lenses. These lenses are complex and difficult to interpret solely using data from surface drilling. The advancement of the exploration ramp across and parallel to the mineralization allows an understanding of the interconnectivity between the different lenses in the Caribou/27 Zone and the Lynx Zone. This provides the geological team a higher confidence in their interpretation of the spacial continuity of the lenses.

In Zone 27, Osisko Mining knew that the Red Dog generation dike was crosscutting the zone. Collection of the bulk sample allowed us to realize that the dike displaces and rotates the mineralization locally. This revelation will guide our geological interpretation and subsequent approach to mine design for the Feasibility Study.

In Zone 27, we were able to better understand how faulting impacts the deposit. We were able to measure the displacement of the fault and to assess the impact of faulting on mineralization.

In the Lynx zone, felsic volcanic rock (rhyolite) hosts the mineralization. Collecting the bulk sample from the Lynx zone allowed us to discriminate between the different structures affecting these types of rocks and to understand their behaviour. Measurement of fault displacement in the gallery of mineralization was completed which is impossible to interpret from surface drilling data.

In both Zone 27/Caribou and the Lynx Zone, the mineralization was mapped and compared with interpretation from surface drilling. This provides a better overall understanding of parameters controlling the mineralization in the different zones.

The stopes were mapped and compared to the geological and block models to identify and improve discrepancies in interpretation and modelling.

Through knowledge gained during collection of the Zone 27 bulk sample, the underground geology team revised and improved their technique and approach to the second bulk sample collection in the Lynx Zone.

Mining

The advancement of the exploration ramp and installation of drifts undertaken to enable the collection of the two bulk samples allowed us to assess and optimize the ground support, water management, ventilation, rate of advancement, and manpower required. This information will provide crucial inputs into the mine design portion of the Feasibility Study.

Specifically, from the bulk sample in Zone 27, it was possible to observe the ground conditions inside the ore and verify the efficiency of ground support involving swellex and mesh straps in the walls. The drill hole pattern for split blasting has been revised based on our observations. We have quantified the rates of advancement for each zone of the deposit and can rely on this information instead of using generic estimates.

The bulk sample in Lynx provided us with the opportunity to evaluate the mining method proposed in the PEA: long hole stoping. This included verifying that the 20 m distance for sub levels (used in the PEA) is feasible.

The stope length proposed in the PEA has been tested. We successfully utilized a 30" borehole in the slot raise. The hanging wall and footwall stability is being continuously monitored, which will enable us to verify the estimates from geotechnical testwork against real time observations. Finally, we had the opportunity to test a very narrow section of the orebody (width of 2m and production holes of 2 ½ inch diameter) and we will be able to use the results to guide our mine design for the Feasibility Study.

[Metallurgy](#)

The grade estimate from the block model was reconciled against the measured grade provided from the mill. The results allow us to better estimate the grade of the deposit by using more realistic capping values and adapting the model for use in the Feasibility Study.

[Mineral Processing](#)

Power Requirements and Equipment Sizing

For the Zone 27 bulk sample, the energy requirement during crushing to reduce the ore from an 80% passing feed size (F80) of 75mm to an 80% passing product size (P80) of 9.6mm was calculated to be 4.5 kWh/t. The energy requirement for the Lynx bulk sample will be calculated when it is processed at the Redstone Mill. Energy requirements are specific to each ore type and the data is useful in designing the equipment and estimating the power needs for the crushing circuit. In the absence of data from a real mill trial, crushing circuit design is based on laboratory testwork and theoretical equations developed from generic results which can mask critical and costly challenges. For example, recent challenges in industry include the breaking of diamonds during crushing at the Renard mine and the lower than expected initial throughput of the crushing circuit at the Malartic Gold Mine.

Gold Recovery: Gravity Circuit (Mill vs. Laboratory results)

During the processing of the Zone 27 bulk sample at the Redstone Mill, gold recovery from the gravity circuit was 39% (December 2018) and 31% (May 2019). These values differ from the E-GRG laboratory test results performed on ore from Zone 27 which showed gold recovery from gravity testing ranging from 22 to 27%. According to Gy's theory, the bulk sample result in the mill is considered more accurate than the laboratory results due to the larger sample size (5,000 tonnes vs 35 kg).

Flotation Circuit

Results from the flotation circuit during processing of the Zone 27 bulk sample at the Redstone Mill were compared to laboratory results used in the PEA. The information will be useful in designing the processing circuit for the Feasibility Study.

Tailings Management

Results from assays of the tailings stream from the Redstone Mill showed that the concentration of sulphur was approximately 1%. This data is useful for comparison with geochemical laboratory testing and for input into tailings design in the Feasibility Study.

[Water and Waste Rock Management](#)

In July 2017, Osisko Mining started to dewater the ramp and water treatment was put in place in preparation for bulk sampling. In addition to groundwater, runoff water from the waste rock stockpile is also treated. The treatment has been operating since (2.5 years) and valuable data on water quality is being collected. This data will be very useful and will serve as input in the water quality model that will be used in feasibility to design the water treatment system for the future mine.

In 2018, when preparing the second request for the Lynx and Underdog bulk samples, Osisko Mining asked Golder to evaluate the volumes of groundwater infiltration in the exploration ramp. Volumes were evaluated at 1,200 m³/day once the complete length of the ramp would be developed. Osisko Mining now

has developed approximately 50% of the ramp (to Caribou-27, Lynx and Underdog) and the current infiltration rate is measured to be between 500 to 600 m³/day depending on the season. The measured infiltration rate confirms Golder's evaluation and provides valuable information for the coming feasibility. Osisko Mining faced certain challenges in controlling groundwater infiltration because of the important number of exploration drill holes crossing the ramp. A grouting program of existing drill holes from surface was undertaken in order to reduce water infiltration.

As in many other operations, ammoniacal nitrogen is one component in Windfall Lake's water that needs to be treated. With limited means, the environment team has learned to manage this component by working with underground workers to limit the explosives residues left in the openings, managing volumes and concentrations from feeds, controlling pH and adding treatment units.

Advancing the exploration ramp is producing waste rock that is stored on the lined stockpile. We now better understand how fresh blasted rock influences water quality during periods of thaw. Also, by surveying the volume of the pile and using data of tonnage of rock placed on the pile, we were able to calculate our rock density and compare it with the density in our assumptions. This is a valuable number that will be used by engineering teams during feasibility.

8.0 PROJECT INFRASTRUCTURE

Existing Infrastructure and Evolution

The Windfall Lake site is divided in two; the ramp area at the North and the camp area located at about 2 kilometres to the South (see Map 3).

Camp Area

To support exploration work, the following facilities have been built at the Windfall Lake Camp:

- Four core shacks
- Core storage area with racks
- Core cutting room
- Temporary trailer-type facilities for:
 - Administrative offices
 - Dormitories for 300 workers
 - Recreation area
 - Clinic and infirmary
 - Kitchen and dining room
 - Dry for underground workers
- Three wells (with certificate of authorization (CA)) for withdrawing potable water
- Three septic tanks and fields (CA) built for a capacity of 300 workers
- Industrial storage area with containers
- Two megadomes (environment and maintenance)
- Three temporary maintenance and storage areas for drilling companies (Forage Rouillier, Orbit-Garant and Major) including gas tanks (3) and diesel tank (1)
- Propane tank for the kitchen (1)
- Diesel tank (1)
- Gas tank (1)
- Waste management area (composter, separate bins for domestic waste, wood, metal, etc..)
- Containers for contaminated soils

- Containers for hazardous material management
- Helicopter landing pad.

Ramp Area

The portal and the ramp were started by Noront in 2007. In 2017, Osisko Mining dewatered, rehabilitated and continued the advancement of the ramp. The ramp area includes the following surface infrastructure:

- Bypass access road and gate house
- Ramp portal
- Megadomes (2) for mining storage and maintenance
- Surface storage area
- Septic tank and field
- Detonator and explosive storage
- Ventilation raise and fans
- Propane tank for underground air heating (1)
- Diesel tanks (2)
- Overburden and compost stockpile
- Unlined waste rock stockpile
- Lined ore/waste rock stockpile (approx. 41,000 m²) with water collection ditch
- Sedimentation pond
- Polishing pond
- Water treatment units
- Geotube filtration system
- Pad with generators with capacity of 6MW
- Diesel tank (1)

Exploration Ramp

Noront started ramp advancement in February 2008, but activities were prematurely suspended in October 2008 before completing the planned 3,300 metres of ramp. When work stopped, the ramp was 1,200 metres long and approximately 230 metres of drifts had been driven.

In July 2017, with all authorizations in hand, Osisko Mining dewatered the ramp and started the rehabilitation of the existing ramp (ground support, installation of services, etc.) with the intention of resuming advancement of the ramp and taking a bulk sample in the Caribou/27 zone. The ramp was extended by 945 meters, a ventilation raise (107 meters) was put in place and a 5,500 tonnes sample was taken in Zone 27 during the fall of 2018. The material from the sample was transported and processed at the Northern Sun Mining Redstone Mill in South Porcupine.

Following the bulk sample collection in Zone 27 and after receipt of all necessary authorizations, the ramp was extended by 2,135 meters to the Lynx zone for the purpose of taking a second bulk sample. Also, 533 meters of ramp; shorter than the initially 3,584 meters planned, were also driven towards Underdog initially for the purpose of taking a bulk sample but also for exploration drilling. Indeed, the geological information that was gathered through both drilling and driving the exploration ramp as well as the on-

going results from our surface drilling campaign led to the conclusion that collecting a sample from Underdog would not be as high a priority as exploring the top portion of the Triple Lynx sector.

In order to reach the top portion of Triple Lynx, 4,700 meters of ramp would have to be developed along with two additional ventilation raises (220 and 260 meters) to support the underground activities. One of the two ventilation raise will be underground and the other one will reach surface (location of surface breakthrough is shown on Map 3).

Waste Rock Lined Stockpile

In 2008, as part of Noront's bulk sample project, the lined stockpile consisted of two sections designed to store ore and waste rock. Based on historical information, it appears that ore and waste rock were mixed and stored on the facility. When Osisko Mining resumed the bulk sampling activities in July 2017, the capacity of the existing stockpile was enough to store the waste rock from the advancement of the exploration ramp to Zone 27. When Osisko Mining received the authorization to collect two additional bulk samples, an extension to the lined stockpile was built. Contact water from the lined stockpile is collected in a lined ditch and directed towards the sedimentation and polishing ponds for treatment.

The ramp towards Underdog is only developed to a length of 533 meters for now; shorter than the 3,584 originally planned. The exploration ramp going towards the top portion of Triple Lynx, will be 4,700 meters in length therefore a second expansion of the lined stockpile is needed. The table below presents the capacity of the lined stockpile over the different phases of the exploration project:

Table 4: Lined Stockpile Capacity

YEAR	CAPACITY (t)	QUANTITY STORED (t)
2007	107,500	0
2008	90,000	18,500
2017	90,000	29,166
2018	540,000	225,914
2019*	540,000	351,703
2020**	980,000	-

* As of October 31st, 2019

**Capacity to store the waste rock produced to advance the ramp to Triple Lynx.

The changes in configuration of the lined stockpile are described and shown in the following sections entitled "Additional Infrastructure" and "Principal Potential Impacts".

Unlined stockpile

When Osisko Mining acquired the Windfall Lake Project, the unlined waste rock stockpile contained approximately 79,000 tonnes of material. The stockpile was seen by Osisko Mining as valuable material and was reused as an underground road base for the exploration ramp and as a protection layer on the synthetic membrane placed as the foundation of the lined stockpile expansion. The table below presents the capacity of the unlined stockpile over the different phases of the exploration project:

Table 5: Unlined Stockpile Capacity

YEAR	REUSED (t)	REMAINING ON STOCKPILE (t)
2008	0	79,000
2017	1,000	78,000
2018	25,500	52,500
2019*	2,000	50,500

* As of October 31st, 2019

Osisko Mining continues to use the material as a road base for the underground exploration ramp and it is Osisko Mining's intention to take this material again for use as liner protection layer during the construction of the second extension of stockpile. Ideally, if remaining quantities match our construction needs, the unlined stockpile will be empty, and its impacted footprint mostly covered by the extension of the lined stockpile.

Overburden stockpile

During the initial bulk sampling preparation work in 2007 and 2008, overburden was removed and stored on a stockpile. Between 2016 and 2018, the exploration camp and the lined stockpile were expanded, and the resulting stripped overburden was mostly put on the pile but also used to reclaim impacted areas.

The current volume of overburden is estimated at 50,000 m³. Since September 2018, Osisko Mining has been composting food waste from the cafeteria and cardboard and the last phase of maturation of the compost (and final storage) is done on the overburden stockpile. After a year of activity, Osisko Mining composted approximately 36 tonnes of food waste and 12 tonnes of cardboard. Without composting, this is 48 tonnes of waste that would have travelled 115 km to Lebel-sur-Quévillon to end up in a landfill.

The overburden that will be stripped from the lined stockpile expansion and from the footprint of the new water collection pond will also be put on the overburden stockpile. The overburden and the compost will be all used for site reclamation closure; this stockpile is therefore temporary and should be completely empty by the end of the closure phase.

Additional Infrastructure and Upgrade

Changing priorities to the top portion of Triple Lynx instead of Underdog will require construction of new infrastructure and upgrading some existing infrastructure.

New pond for collecting water from the ramp: As the extension of the exploration ramp progresses and as the waste rock stockpile footprint increases, more water will need to be collected and treated. The existing sedimentation and polishing ponds were designed in 2007 and no longer fit the needs of the current project therefore, a new pond will need to be built. The new pond will have the capacity to collect the new volume of water coming from underground and the increased volume of water collected from the surface of the lined stockpile.

Expansion of the lined stockpile: Map 3 shows the lined stockpile and the extension that will be necessary to handle the additional waste rock and temporary storage of mineralized material prior to transport to the processing facility. The stockpile will be expanded to the west on the current road towards the portal and on the unlined stockpile with an additional 52,580 m² and the height of the expansion will be of 6 meters. Table 4, earlier in this document, presents the tonnages of the stockpile and the drawing from WSP is found in Appendix C, shows the preliminary configuration of the stockpile and its expansion.

Electrical distribution line: The stockpile will be expanded to the west on the road to the ramp therefore, the electrical line will have to be relocated. Figure 1 later in this document shows the redirection of the traffic and the new location of the electrical line.

Ventilation raises: Two additional ventilation raises will be necessary for health and safety reasons; to provide fresh air and to be used as emergency exits. One of the two ventilation raise will be underground and the other one will reach surface (location of surface breakthrough is shown on Map 3).

The plan to file a request to expand the exploration ramp was presented to the Tallyman, his family and members of the Waswanipi community on October 23 and on November 12, 2019. Osisko Mining explained the purpose of changing the location of the bulk sample from Underdog to the top portion of Triple Lynx. Osisko Mining also explained the need to expand the lined stockpile towards the west to store the additional waste rock and to build a new pond to collect water.

For the family of Tallyman W25B, the removal and reuse of the unlined stockpile material on the new lined expansion, and the fact that the contact water will now be collected and treated are positive news. On the other hand, the family would like the bypass road located on the east side of the lined stockpile to be widened in order to accommodate two vehicles travelling in opposite direction and maintain a safe access to their hunting area further north. Osisko Mining agreed to include the communities' contractors to participate in the call for tender for the ore transportation (Triple Lynx bulk) to the mill in Ontario as requested by the Waswanipi representatives.

A letter of support for the bulk project from the Cree First Nation of Waswanipi is included in Appendix D.

Working at Windfall Lake Camp

Windfall Lake Camp currently accommodates between 230 and 250 workers (total permitted capacity of 300); both Osisko Mining employees and contractor employees. As of September 30, 2019, Osisko Mining had a total of 122 employees, with 24 identifying as Aboriginal people. A total of 356 contractor employees are working at the Windfall Lake site including 59 First Nation workers. The following shows the job position breakdown of the Windfall Lake workers:

- Exploration drilling 336 people
- Exploration ramp 62 people
- Camp management 73 people
- Health and Safety 11 people
- Environmental Management 6 people
- Other 37 people

Most workers are doing rotations of 15 days at site and 13 days off while a minority is doing 8 days at site and 6 days off. Each Thursday, charter flights bring workers from St-Hubert, Québec and Bagotville to

Lebel-sur-Quévillon. On the same day, a bus travels from Rouyn-Noranda, Val-d'Or, and Senneterre to Lebel-sur-Quévillon. Also, on Thursdays, a second bus travels from Chibougamau, Chapais, and Waswanipi to Lebel-sur Québec. The workers arriving from the charters and 2 buses are transported from Lebel-sur Québec by bus to the Windfall Lake site. Other buses transporting employees from contractors (CMAC, Orbit, Major and Rouillier) arrive daily from Monday to Thursday.

Osisko Mining has five main values that guide our employees and define our company culture:

Respect: Display respect in all our actions and interactions.

Passion: Use our passion and commitment to energize, engage and inspire.

Diversity: Hire and nurture a diverse and inclusive team.

Integrity: Be honest, open, ethical, and fair. Keep our word.

Efficiency: Be efficient and creative in our use of resources.

Osisko Mining's sustainability objectives are focused on three key components: Society, Environment and Economy. The company rigorously complies with the current laws and regulations of the jurisdictions in which it conducts its activities. We are committed to protecting the environment and the health and safety of our employees and the general public, while taking into consideration the concerns of the host communities of our projects.

Our sustainability objectives are met through the application of the following policies:

- Health, Safety and Sustainability
- Workplace Harassment
- Workplace Violence
- Drug and Alcohol
- Whistleblower
- Code of business – Conduct Ethic
- Other

In addition, we support some of our policies through the application of management plans such as the Emergency Response Plan and the Spill Management Plan. Copies of these documents are available upon request.

9.0 COMPONENTS OF THE ENVIRONMENT

Biophysical Environment

Physiography and relief

The study area is situated in the Abitibi Uplands of the James Bay physiographic region. This region is characterized by glacial deposits of silt and clay that promoted the formation of numerous vast peat bogs interspersed by tracts of forest (FAPAQ, 2003).

More specifically, the topography of the study area is flat with very gentle slopes. The elevation of the property is roughly 400 metres above sea level.

Hydrography

The study area is part of the Opawica River watershed. Most of the water bodies in the study area are small. Recently, during a meeting with the tallyman of trapline W25B and members of the Waswanipi community, we have learned that the water bodies have Cree names. Going forward, we will use the Cree names for the water bodies, when they are provided to us. Unnamed Lake 1 is the largest, covering 109 ha. The water from Windfall Lake flows northward through a chain of lakes. The water of Unnamed Lake 1 flows to the southeast. Two eskers, oriented northeast-southwest, are found between Windfall Lake and Unnamed Lake 1. Neither is used as a source of drinking water.

Vegetation

The vegetation landscape in the study area is dominated by the spruce-moss bioclimatic domain. It is composed of forests of variable density dominated by black spruce (*Picea mariana*). Ericaceous shrubs are found everywhere, forming a relatively dense shrub layer in the land vegetation groups and in the wetlands. The herbaceous stratum, however, shows little diversity. The moss layer, which is mainly composed of feather (hypnaceous) mosses, sphagnum and a few lichens, covers the entire ground.

Significant wetlands have been documented in the vicinity of the Windfall Lake Property; the largest is 2 kilometres west of the property and covers more than 2,000 ha (Genivar, 2007).

The forest harvest that took place in the past has modified the local landscape considerably. Hence, the majority of the study area is comprised of forest in the regeneration phase. The forest regeneration is dominated by black spruce and jack pine. Throughout the territory and mainly around the water bodies, forested strips that were not cleared can be found. These forest areas are comprised of terrestrial environment, mainly black spruce-moss stand, and wetlands that are open peat-bogs or treed peat-bogs. In the south-east of the study area, a large expanse of wetlands comprised of open peat-bogs or treed peat-bogs is found around Unnamed Lake 2.

No threatened or vulnerable plant species or likely to be so designated (VECE) were identified or observed on the studied area or within a radius of 8 kilometers. Based on the information derived from the "*Guide de reconnaissance des habitats forestiers des plantes menacées ou vulnérables de l'Abitibi-Témiscamingue et Nord-du-Québec*" and the habitats found in the study area, the peat-bogs and the shallow lakes or ponds represent the most potential habitats to host VECE.

In meetings with the tallyman of trapline W25B and members of the Waswanipi community, we have learned that there is a non-registered biological refuge located south of the Windfall Lake camp. The tallyman wishes to protect this area from any exploration activities. None of the proposed work for the ramp advancement, lined stockpile extension or pond construction is in the vicinity of the refuge.

Wildlife

Mammals

Among the species of mammals that likely frequent the study area are the moose (*Alces alces*), the grey wolf (*Canis lupus*), the black bear (*Ursus americanus*), the Canada lynx (*Lynx canadensis*) and the snowshoe hare (*Lepus americanus*). Although woodland caribou (*Rangifer tarandus*) are present in the greater region, the Windfall Lake site lies beyond their official range.

The caribous of the local population (herd), designated as Assinica, that occupies the north-west territory of Lebel-sur-Quéillon are the most susceptible to frequent the project study area. An inventory was done by WSP, accompanied by the tallyman of trapline W25B between March 19-22, 2018. It revealed the

presence of three caribous in the southern limit of the inventory zone; at 20 km from the Windfall Lake site. These results show a very low density in the range of 0.19 caribou per 100 km². No other evidence of this species' presence was noted in the inventory zone. Considering an observation rate of 85%, the number of individuals would be estimated to four, with a density of 0.25 caribou per 100 km².

In addition to the jumping mouse that could not be identified to the species, the inventories conducted in 2016 confirmed the presence of five other species of small mammals. It should be noted that none of these species has a special conservation status.

Concerning chiropteras, the 2016 inventories done by WSP allowed us to confirm the presence of six species of bats, being all potentially present species in the region as per their geographic distribution. The results of the inventory also confirmed the use, by the chiropteras of the sites associated with mature forest stands, water bodies and wetlands during the breeding season and the migration period.

Avian Fauna

Specific inventories done by WSP targeting avian fauna were done in the spring and the summer of 2016 accompanied by a member of the Cree community of Waswanipi. In that respect, 69 bird species (27 families) were observed during the nesting period.

The inventory of waterfowl and water birds breeding pairs confirmed the presence of the Canada goose (*Branta canadensis*), one species of dabbling duck, four species of diving duck and three other aquatic species. The observed specific diversity and the density are like what is observed at the regional scale. Concerning the broods of duck's inventory, only four broods were observed.

With regards to prey birds, the inventory confirmed five species during the nesting period namely the bald eagle (*Haliaeetus leucocephalus*), a special status species.

In addition to the bald eagle, four other special status species were observed during the nesting period namely the common nighthawk (*Chordeiles minor*), the Canada warbler (*Cardellina canadensis*), the olive-sided flycatcher (*Contopus cooperi*) and the rusty blackbird (*Euphagus carolinus*).

Concerning land birds, the breeding pairs density observed in the study area are like those observed elsewhere in the region. Regarding the species associated with wetlands, including passerines and shorebirds, the inventories revealed the presence of 15 species.

Amphibians and reptiles

For amphibians and reptiles, the *Atlas des amphibiens et des reptiles du Québec* (AARQ) lists eight species that may be found in the study area provided a suitable habitat is present. They are the blue-spotted salamander (*Ambystoma laterale*), the spotted salamander (*Ambystoma maculatum*), the American toad (*Bufo americanus*), the spring peeper (*Pseudacris crucifer*), the northern green frog (*Rana clamitans malanota*), the mink (or North) frog (*Rana septentrionalis*), the wood frog (*Rana sylvaticus*) and the common garter snake (*Thamnophis sirtalis*) (AARQ, 2014).

Inventories carried out by WSP in 2016 revealed five-anuran species (American toad, wood frog, mink frog, green frog and spring peeper) and two species of salamander (blue-spotted salamander, northern two-lined salamander). Furthermore, camp employees have mentioned the observation of the garter snake.

Fish

Twelve species of fish were caught during fishing programs in 2009, 2016 and 2017: the northern pike (*Esox lucius*), the mottled sculpin (*Cottus bairdii*), the cisco (*Coregonus artedii*), the burbot (*Lota lota*), the white sucker (*Catostomus commersoni*), the lake chub (*Couesius plumbeus*), the brook trout (*Salvelinus fontinalis*), the yellow perch (*Perca flavescens*), the fallfish (*Semotilus corporalis*), the walleye (*Sander vitreus*), the lake white fish (*Coregonus clupeaformis*) and the brook stickleback (*Culaea inconstans*). Northern pike was caught in all surveyed lakes. Yellow perch was most common in Windfall Lake. Brook trout was caught only in watercourse 7. Walleye was caught in Unnamed Lake 2

Among the species caught, the walleye, the lake whitefish, northern pike, cisco, burbot, brook trout and yellow perch are of interest for recreational and traditional fishing. Osisko Mining, recognizing the importance of walleye for the Cree community, consulted tallyman Mr. Marshall Icebound. Except for Unnamed Lake #2, he confirmed that he has never caught walleye in the lakes targeted by the 2016 and 2017 inventories. Mr. Icebound participated in the fishing survey of Unnamed Lake 2 in September 2017.

Finally, fishing survey was carried on in July 2018 in Kettle Lake (north-west of the portal) but no fish was captured in this lake. Characterization of the shores did not reveal the presence of any aquatic plants or any potential spawning area. The shores of Kettle Lake appeared rather dried due to the important lowering of the water levels. Hence, based on the inconclusive fishing results and the absence of visible water streams linking Kettle Lake to other water bodies, it is possible to consider that the lake does not currently support any fish population.

Other

Genivar conducted a hydrogeological study in March 2008 as part of the bulk sampling project. The goal of the study was to meet the requirements set forth by the MDDEP (Directive 019) and complete the crown pillar study (*Regulation respecting occupational health and safety in mines*).

Golder carried out a second hydrogeological study in November 2017 as part of the bulk-sampling request for the Lynx and Underdog sectors but also as part of the environmental impact assessment of the Windfall Lake Project (Environmental Assessment). This study allowed the assessment of the water infiltration volume for the new zones. It also included sampling of several observation wells to assess the baseline water quality.

Human Environment

Socio-economic context

The project falls into the Nord-du-Québec administrative region (Region 10), having a surface area of 707 164 km² of land. The region is comprised of three geographical regional county municipalities (RCM): Jamésie, the Kativik regional administration and Eeyou Istchee.

More precisely, the project is located on the territory of the Eeyou Istchee James Bay Regional Government. It should be noted that the Municipality of Baie-James no longer exists since the creation of the Eeyou Istchee James Bay Regional Government on January 1, 2014. The latter is a municipal body governed by the *Cities and Towns Act* and its territory is composed of land formerly belonging to the Municipality of Baie-James, except for Category II lands.

The Eeyou Istchee James Bay territory includes the municipalities of Chibougamau, Chapais, Lebel-sur-Quéillon and Matagami, as well as the nine (9) Cree communities of Nord-du-Québec: Chisasibi,

Eastmain, Waskaganish, Wemindji, Whapmagoostui, Mistissini, Nemaska, Oujé-Bougoumou and Waswanipi. According to the most recent statistics, the Jamésie territory has 13,927 inhabitants and Eeyou Istchee has 17,854.

With 6,862 inhabitants, Chibougamau has the largest population in the region. Other agglomerations include Lebel-sur-Quévillon with a population of 2,015 (2016).

Land use

The legislative and legal context of Nord-du-Québec is notably governed by the James Bay and Northern Quebec Agreement (JBNQA), the Northeastern Quebec Agreement and the Agreement concerning a New Relationship between the Gouvernement du Québec and the Crees of Québec, also called the "Peace of the Braves." The territorial regime introduced by the JBNQA is a determining factor in land use. It provides for the division of James Bay territory into Category I, II and III lands. The Windfall Lake Project is located on Category III land, that is, Crown land part of the domain of the State, most of which is dominated by forestry activities. It should be stated that on this land, First Nation people have an exclusive right to harvest certain aquatic species and certain fur-bearing animals.

Except for Mr. Icebound's family camp (tallyman of W25B) and one non-Aboriginal seasonal hunting camp, the site is characterized by the absence of dwellings. Indeed, the closest residential areas are in Lebel-sur-Quévillon, Chapais and the Cree community of Waswanipi. Furthermore, there are four outfitters in a 10-km radius of the project namely, Pourvoirie Lac Hébert, Pourvoirie Lac Lacroix, Pourvoirie St-Cyr Royal and Pourvoirie WeteNagami.

Lebel-sur-Quévillon, just a little more than 115 km from the mine site, is an urbanized area that groups together residential, public and commercial uses, services, industrial zones and public institutions.

Infrastructure

Provincial highway 113 crosses the study area from east to west. It is the only road linking the Abitibi to Lac St-Jean. Numerous forestry roads crisscross the area. Two high-voltage power lines cross the area from north to south.

Archaeological potential

The project study area was the subject of an archaeological potential study in 2007 (Archéo-08, 2007) on behalf of Noront. The study revealed that the archaeological significance of the project area was not well known, and no site was inventoried. According to the Archéo-08 report, the only known archaeological manifestations in this area are two native prehistoric sites discovered in the late 1970s on the banks of the Saint-Cyr River, 6 km east of Barry Lake.

The same report also mentions that the banks of most rivers likely represent high archaeological potential (classified as A). These areas would undoubtedly have been used by Native Americans for subsistence activities for several millennia. The archaeological potential is lower (classified as B potential) moving away from the riverbanks, particularly on elevated terraces. However, there are portage routes that cross these terraces to connect the bodies of water. Special attention should be given to the above areas (A and B). The remainder of the land, representing most of the study area, has no archaeological interest (classified as C potential).

The project study area was the subject of an archeological inventory in November 2017 and in July 2018 (Archéo-08, 2018) on behalf of Osisko Mining. The purpose of the work was to verify the presence or absence of archaeological remains in the project study area. The sectors studied were based on the 2007

archaeological potential study (and on the area covered by the 2017-2018 drilling program). Waswanipi community members participated in this field survey, including the son the the tallyman of trapline W25B.

A total of 1,028 trial trenches were excavated and visual inspections have been carried out within the limits of the study area. This inventory did not lead to the discovery of archaeological sites or artifacts, so there are no archeological constraints in the sectors studied. The other sectors with archaeological potential located in the limits of the future mining project will have to be inventoried in further archaeological studies and their archeological potential remains the same.

10.0 MAIN POTENTIAL IMPACTS

Since 2015, work at the Windfall Lake Camp focused on surface exploration drilling, ramp dewatering, ramp rehabilitation and finally, since the fall of 2017 advancing the exploration ramp for the purpose of collecting bulk samples. Postponing the Underdog bulk and targeting the top portion of Triple Lynx will not increase the level of activities as all these operations are already ongoing at site. Two sectors will be used to increase the size of the lined stockpile and to build a new pond and most of these areas is already cleared.

Fish Habitats

To date, the Windfall Lake infrastructure has not encroached on fish habitat. For this reason, Fisheries and Oceans Canada is not involved in the project. The nature of the work planned for the bulk sampling of the top portion of Triple Lynx should not have an impact on lakes and fish. Since July 2019, monthly Windfall Lake Environmental Monitoring Committee meetings have been held with members of the family of the tallyman of trapline W25B. These meetings provide a regular and frequent opportunity for the tallyman to identify any concerns for the duration of the project, which will take place until June 2021.

Wetlands

No wetlands will be affected during the bulk sampling project.

Woodland Caribou

In the interest of education and prevention, the subject of woodland caribou will be raised during orientation meetings with new employees giving advice about how to behave during a caribou encounter and to report location and time of encounter.

Small Wild Game

Most of the infrastructure needed for the bulk sampling project is already present on site. Historically, the area was affected by the forestry activity and advanced mining exploration. This new bulk project should not have any significant additional effects on small wild game.

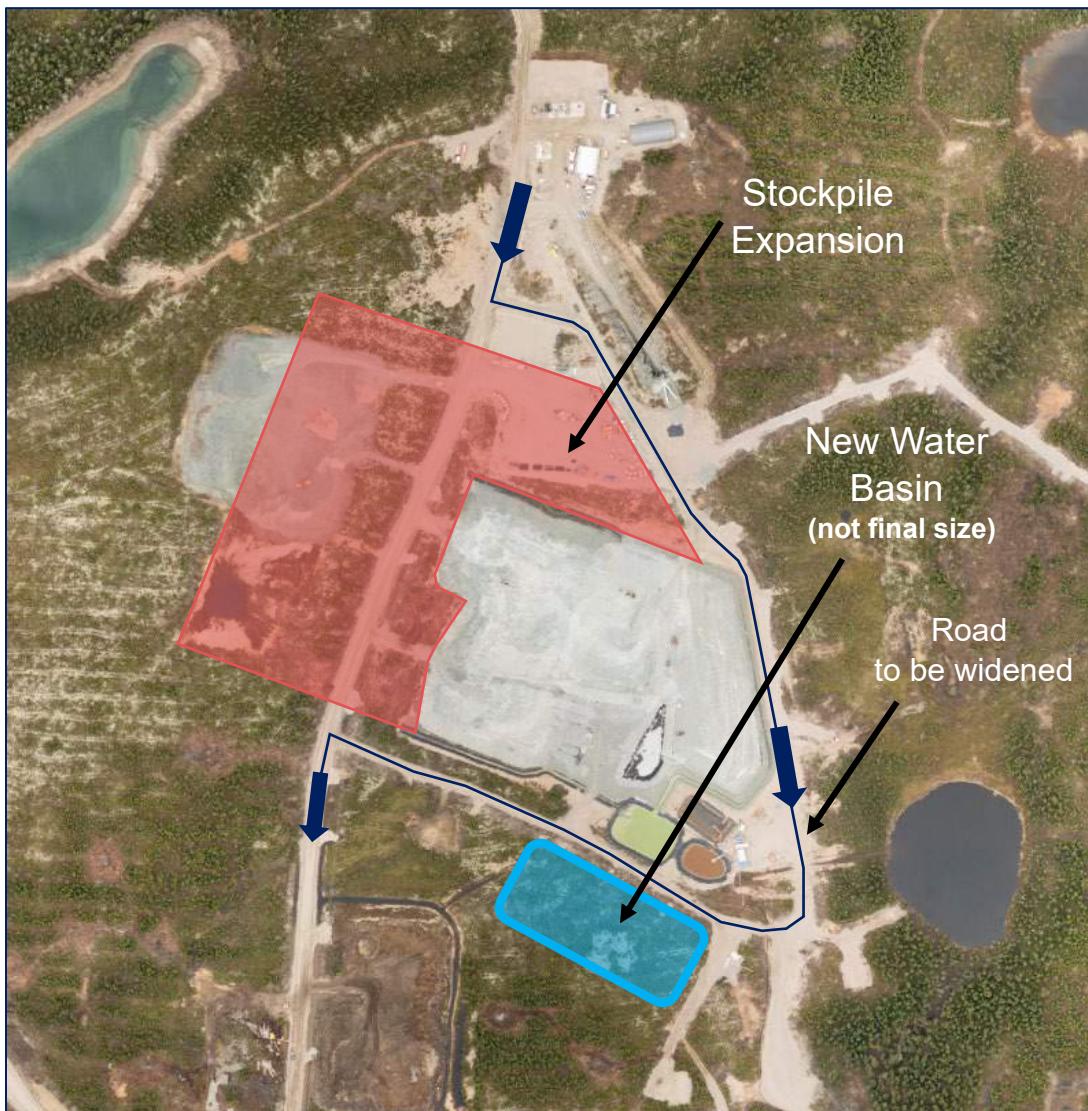

Land Clearing

The main impact related to this new project of bulk is the clearing of land where infrastructure will be built. The management of additional waste rock will require a second expansion of the lined stockpile. This expansion will be done towards areas that are already impacted namely the warehousing sector currently used by CMAC (completely cleared), the road, the unlined pad and an historical exploration trench. The material of the unlined stockpile will be used for the construction of the expansion for the new lined expansion. The expansion will cover most of the unlined stockpile footprint.

Traffic

The portion of the road between the stockpiles (lined and unlined) will be covered with waste rock from the expansion of the lined stockpile. Traffic between the ramp and the camp (workers) will be rerouted to the east of the lined stockpile as shown on Figure 1 below. During the meeting on October 23, the tallyman of trapline W25B suggested widening the road to the east and south of the lined stockpile to allow for at least 2 vehicles to pass safely and easily.

Figure 1: Lined Stockpile Expansion and New Pond

In 2018, the bypass road (gard house) was built to avoid vehicular accidents and inconveniences arising from heavier traffic between the ramp site and the stockpiles. It remains the best way to reach the camp when coming from the 6000 road. Operations related to the new bulk sample will not increase traffic; the same level of activity is expected.

Dust Management

As mentioned in the paragraph above, the operations related to bulk sampling will not increase traffic. The current mitigation measures to control dust emissions will continue.

Site Roads

During the summer, in dry periods, water is put on the roads using a water tanker in busy sectors of the site when there is apparent dust emission. In addition, the speed is limited to 30 km/h on most road segments. The order to spread water on the road is given by the Surface Superintendant when dust emission is noticed. The request may also be passed on the by the Healty and Safety Supervisor or the Environment Supervisor.

Ramp Portal to Stockpile (250 m)

For the portion of the road between the ramp portal and the stockpile (250m), water is spread on the road as needed in order to control dust emissions. Surveillance is enforced to control the 30 km/h speed limit. Road watering is the main mitigation measure for dust control on the stockpile when placing ore and waste.

Road Between Site and Lebel-sur-Quévillon (115 km)

Bulk sampling of the top portion of Triple Lynx will total 5,000 tonnes. The ore samples will be temporarily placed on the lined waste stockpile to be later transported to the Northern Sun Mining Redstone Mill in South Porcupine. The ore transportation will be done between May and June 2021. Transportation of 5,000 tonnes of ore will require 100 50-ton trucks, surveillance will be enforced to control the 70 km/h speed limit.

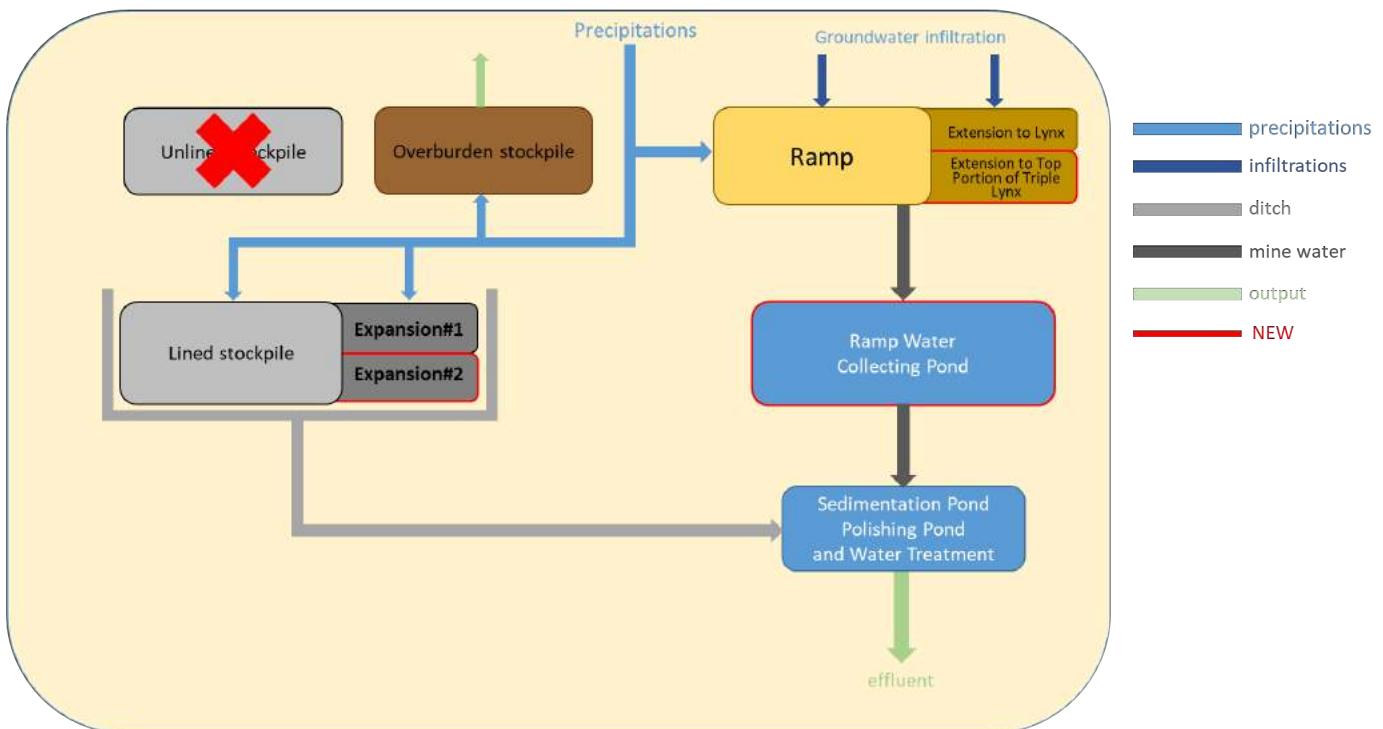

Waste Management at Windfall Lake

Designated employees are specifically assigned to waste management. The Windfall Lake site has a specific area where all waste is managed. The composter is installed in that area and it also include bins and containers for domestic waste, wood, copper, ferrous metal and contaminated soil. Hazardous material is separated, identified and stored in the environmental domes and in containers with secondary containment. With a camp population averaging between 230 and 250, Osisko Mining is always fine-tuning its waste management and implementing new ways to improve recycling performance and management practices in general. Osisko Mining has been composting food waste and carboard since September 2018 hence reducing the transit of waste on the 115 km route to Lebel-sur-Quévillon and producing compost to be used at closure of the site. A garbage compactor will be installed this fall to compact domestic waste in a ratio of 5:1 reducing by that same ratio the amount of trucks transporting garbage on the road, thus reducing greenhouse gas emissions.

Water Management

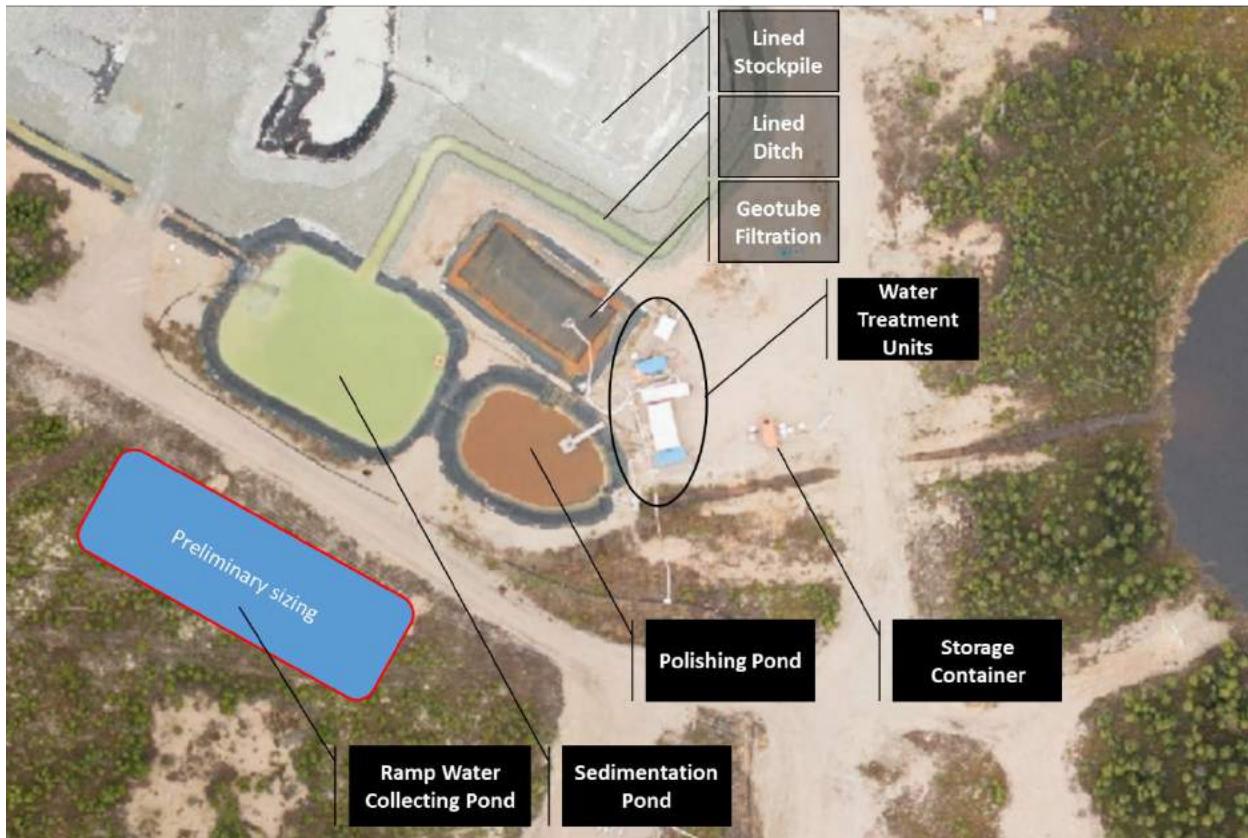

The following figure illustrates the water management cycle at the Windfall Lake site, including the second expansion of the stockpile, the ramp and the new water collecting pond. It is important to note the removal of the unlined stockpile because this material will be placed on the lined stockpile; an advantage as all contact water will now be collected and treated before release to the environment.

Figure 2: Windfall Lake Water Management Cycle

This third figure shows the area where the stockpiles, the water collection ditches, the ponds (including the new one) and the water treatment plant are located.

Figure 3: Windfall Lake Water Management

Mine water

The exploration ramp was dewatered in July 2017 and has been kept dry since. The volume of groundwater infiltration has increased from 250 to 660 m³/day and is now averaging 550 m³/day. A hydrogeological study was completed in the fall of 2017 and estimated the groundwater infiltration volumes that needed to be managed (Golder, December 2017). The estimate of groundwater infiltration was 1,200 m³/day with all planned openings completed (Caribou, 27, Lynx and Underdog). The actual measured volumes of groundwater infiltration show that we are within the Golder's estimate.

All underground equipment uses recycled groundwater which is treated to remove suspended solids using a device called the "Mudwizzard". The increase of the stockpile surface area and the groundwater infiltration will increase the volume of water to be collected and treated. The current capacity of the water treatment plant is adequate however, an additional collecting pond will be needed to allow dewatering without interruption when the smaller sedimentation and polishing ponds are full. Water management

structures and processes will be reviewed by WSP and the new water collecting pond will be properly sized.

Water collection ditches

The contact water from the lined stockpile will be collected in the lined ditch and channeled to the sedimentation pond, before being treated and sent to the polishing pond. Contact water from the unlined waste stockpile was never collected and treated however, the expansion of the lined stockpile will almost cover all its footprint and water will now be collected and treated. Water management at the overburden stockpile will remain the same; the pile is surrounded by a ditch in which suspended solids settle.

Water treatment plant, sedimentation pond and polishing pond

The treatment of the water from the ramp and from the stockpile runoff is required for contaminants including suspended solid, ammoniacal nitrogen and zinc when needed. Water has been treated since July 2017 and parameters to treat are well known.

Mine water is pumped to the sedimentation pond to regulate water flow and quality and to allow the settling of suspended solids (SS). The sedimentation pond has a capacity of 1,500 m³. Water from the sedimentation pond is then pumped to the water treatment plant.

To remove zinc (when needed), pH levels are raised by adding 50% sodium hydroxide (NaOH), which reduces metal solubility. Coagulant (iron sulphate) and flocculant (polyacrylamide) are then added to form flocs which, once the water has been filtered, reduce the metal content and SS content. Sludge filtration is done in a Geotube, set up on a platform from which the filtrate is collected and sent to the polishing pond (capacity of 648 m³).

The water from the exploration ramp and the runoff from the waste rock stockpile contains a certain amount of explosive residue (ammoniacal nitrogen). In order to control toxicity due to the presence of ammoniacal nitrogen, Osisko Mining has put in place numerous strategies:

1. In addition to using emulsion, which is less soluble than powdered explosive, Osisko Mining works with underground workers to minimize the quantity of explosive residues that end up in groundwater.
2. When the outside temperature is above 10°C, water is pumped from the sedimentation pond, pH is raised, and water is diffused in the air in small droplets. This process is called stripping and is very efficient to remove ammoniacal nitrogen during spring, summer and fall.
3. The pH of the effluent is maintained at 6.2. At this pH, for an ammoniacal nitrogen level of 30 mg/l or lower, the Windfall Lake effluent is not toxic.
4. When dealing with ammoniacal nitrogen levels higher than 30 mg/l, water is circulated in zeolite filters (Baker system) for ammoniacal nitrogen removal through adsorption.

Final effluent

Water from the polishing pond is pumped and is discharged from a pipe at the start of the effluent channel. Treated water then flows into the small unnamed lake. Water treatment operation is conducted almost continuously at a rate of approximately 75 m³/h. Our effluent has been subjected to Directive 019 (MELCC) since July 2017 and is subjected to the Metal and Diamond Mining Effluent Regulations (Fisheries Act) since June 2018. The effluent quality results are declared both to MELCC and ECCC.

11.0 INFORMATION AND PUBLIC CONSULTATION PROCESS

Cree Community of Waswanipi

The Windfall Lake Project is located on the traditional lands of the Cree community of Waswanipi, specifically on the traplines of Mr. Marshall Icebound (W25B) and Mr. Gary Cooper (W25A). The Cree village of Waswanipi is located about 75 km north-northwest of the Windfall Lake Project.

Information on exploration work is regularly shared with the Band Council, the Deputy Chief, the Manager of Natural Resources, the Tallymen and the Cree Trappers' Association and the Apatisiwiin Skills Development (previously the Cree Human Resources Development). Meetings were held with the Tallymen to explain the nature of the work and to understand how they use the territory. Throughout 2017 and 2018, Osisko Mining shared information about the proposed Windfall Lake Project including information on the on-going surface drilling activities and the bulk sampling project towards Lynx and Underdog with the Cree First Nation of Waswanipi through letters, meetings, focus groups, interviews, open houses, site visits (surface and underground) and presentations to the band council and general assemblies. This included more than 65 different meetings with Waswanipi representatives, Tallymen, entrepreneurs, a variety of organization representatives, band office employees and community members. So far in 2019, approximately 20 meetings were held with the Cree First Nation of Waswanipi representatives and/or community members including the monthly meetings of the Windfall Lake Environmental Monitoring Committee that commenced in July 2019. Those meetings are intended to understand the Tallyman's and the community's concerns. The community is represented by one member of the Icebound family and the Waswanipi Mining Coordinator. Some recommendations from this committee have already been applied to improve the Windfall Lake Project procedures.

Before Osisko Mining acquired the project, several information meetings had been held between Eagle Hill representatives and Waswanipi representatives, including former Chief Paul Gull. These meetings led to the signing in 2012 of an Advanced Exploration Agreement with the Cree First Nation of Waswanipi, the Grand Council of the Crees and the Cree Regional Authority. Osisko Mining continues to honour the terms of the 2012 Exploration Agreement between Eagle Hill and Waswanipi. Among other things, the Agreement stipulates the negotiation of a Social and Economic Participation Agreement (essentially an impact and benefit agreement: IBA) in the event the project is shown to be economically viable. Osisko Mining has not yet demonstrated economic viability. Discussions are underway with Waswanipi representatives, and preliminary negotiations for an IBA commenced on December 19, 2017 in Waswanipi.

The main concerns described below focus on the importance of respecting the environment, the impact of exploration activities on water and wildlife, the economic benefits to the community, and the respect of cultural sites. Furthermore, as a follow-up to the meetings with Waswanipi representatives and Tallymen (W24D, W25A, W25B, W26 and Lot 19), additional meetings are being planned to share information and consult with community members.

Hunting, fishing and the forest

The traditional lands of the community have been affected by logging, and some members of the community are concerned about further disturbances and the cumulative effect of all activities, as well as how such activities may affect their use of the land. In addition, intact parts of the forest hold great

importance for the Tallymen, and they want to protect them. The Tallyman of trapline W25B, Mr. Marshall Icebound, and other Waswanipi community members participated in some of the base line data collection for the project, such as the birds, fish, moose and caribou surveys.

During a meeting with the Tallyman of trapline W25B on November 15th 2017, a site visit was organized in order to discuss the installations and the infrastructure along with the potential impacts related to the Lynx and Underdog bulk sampling namely the footprint clearing of the expansion of the stockpile. On October 23, 2019 and again on November 12, 2019, Osisko Mining met with the Tallymen and several Waswanipi community members to discuss the potential impacts of the second stockpile expansion and construction of the additional water treatment basin.

Water

The tallymen have concerns about the drilling work, particularly its effect on water quality and fish populations. Osisko Mining's team responded to the concerns by explaining the protocol that must be followed when setting up a drill hole, which involves respecting a buffer zone around lakes, rivers and watercourses. Also, drilling companies use a textile filter to retain drilling mud and ensure sediment does not enter water bodies. In the event of an oil or fuel spill, drilling companies have anti-spill kits on site and a protocol to follow. Some Tallymen also expressed concern about the quality of the water in the ramp. The quality of this water is being monitored through periodic sample collection in accordance with the requirements of the Directive 019. Two Cree water treatment operators were hired to work in the water treatment plant. The water treatment process has been explained to the Tallyman of W25B, the Windfall Lake Environmental Monitoring Committee representatives and other Waswanipi community members during site visits. Also, a Cree company, EnviroCree, was awarded the mandate to do water sampling in the receiving environment beginning in the summer 2019.

Economic benefits

Band Council members have informed Osisko Mining about Waswanipi community member interested in being employed at Windfall Lake. The Band Council sees the project as an opportunity for community members to gain training opportunities and jobs.

Several Tallymen who met with Osisko Mining representatives, along with some members of their families, have relevant skills and prior experience in the exploration and mining industry as machinery operators or line cutters, for example. Several tallymen would be interested in working at the future mine. Other members of the community are contractors who would like the opportunity to bid on contracts.

Currently Osisko Mining has hired Waswanipi community members to work at Windfall Lake as core cutters, equipment and building maintenance, health and safety, water treatment, community relations and human resources. Osisko Mining has received many applications from community members. Meetings were also held with representatives of the Apatisiiwin Skills Development (previously the Cree Human Resources Development) to learn about the programs they offer and to present the Windfall Lake Project and Osisko Mining's needs for future training and employment.

In addition, Osisko Mining has paid in excess of \$23 Million in 2017, \$21 Million in 2018 and \$28 Million in 2019 to businesses owned by First Nations or employing Aboriginal workers, for example:

- Miyuu Kaa / Orbit Garant JV – Drilling
- Miyuu Kaa / Groupe Minier Cmac-Thyssen – Ungerground works
- Miyuu Kaa / Gestion ADC JV – Caterer
- Miyuu Kaa / Fournier et fils JV – Civil works
- Miyuu Kaa / Chrono Aviation – Air transportation
- Construction Cooper-Gilbert JV - Civil works
- Transport MJ Cooper (Gary Cooper) – Loader
- Distribution Signal / Eenouch Petroleum Inc. JV – Fuel
- Amiisk Excavation – Civil works
- Heli-Youdin – Helicopter
- Waswanipi Eenouch Contruction – Camp services
- Washwa Nu – Civil works
- Équipement sportif EFC – M. Henri Dixon – Promotional Items
- Cherish the Language – M. Allan Cooper – Translation services
- Eeyou Communication Network – Internet Services
- Bedabin Gas Station – Fuel
- Johnny Cooper – Translation
- Stanley Saganash – Photography Services
- Annette Neeposh – Caterer
- Caroline Dixon – Caterer
- Norman Ottreyes – Drummers
- John Sanipass – Dancers
- Waswanipi community members – Professional fees for consultation and traditional knowledge expertise
- Cree First Nation of Waswanipi – Employees

Cultural sites

Tallymen provided the location of some cultural sites, and these sites will be avoided when planning any exploration work activities.

Other concerns

The other main concerns of the community members regarded social issues, effects of traffic on the access road, the protection of the environment, Cree culture and human beings.

Approximately 60 people from Cree communities (mainly Waswanipi) work at the Windfall Lake site. More than 80 First Nations people worked on the site in 2017 and approximately 55 First Nations people worked on the site in 2018. To facilitate integration, Osisko Mining hired two people from Waswanipi to be the Waswanipi Community Liaison Advisor and the First Nations Human Resource Facilitator. The Community Liaison advisor is based in Waswanipi with an office in the Band office and the First Nation Human Resource Facilitator is on rotation shift at the Windfall Lake camp. These two people help with the recruitment and integration of Cree workers, mainly by:

- Participating in the interview process;
- Giving pre-employment presentations about life at the camp;

- Organizing cultural exchange events (for example, Aboriginal Day – dancers, drummers and traditional music);
- Sharing information about the Cree way of life (monthly posters explaining the various aspects of Cree culture);
- Facilitating dialogue between the community and employees and translating information into Cree since the Advisor and the Facilitator are trilingual (fluent in English, French and Cree, both oral and written).

Two other First Nation communities have been identified as having an interest in the project: the Algonquin Anishinabeg Nation of Lac Simon and the Atikamekw d’Obedjiwan community. These two communities were visited and the bulk sampling project towards Lynx and Underdog were presented. The Atikamekw d’Obedjiwan community was met five times since 2017 and the Chief and council visited the Windfall Lake Project (surface and underground) in July 2019. The Algonquin Anishinabeg Nation of Lac Simon was met four times since 2017.

The tables in Appendix E summarize the meetings held and information letters sent by Osisko Mining to the municipalities and Aboriginal communities.

Communities of Lebel-sur-Quévillon and Senneterre

Osisko Mining held various meetings and information sessions with representatives and members of local communities. In addition, information letters on exploration activities were sent to municipalities. It should be noted that before Osisko Mining acquired the project, Eagle Hill representatives met informally with Lebel-sur-Quévillon representatives and attended an information session organized by the Economic Development Corporation of Lebel-sur-Quévillon in November 2014. Osisko Mining presented the Windfall Lake Project to the Lebel-sur-Quévillon population in 2016, 2017 and 2018. Two Open House events were organized in Lebel-sur-Quévillon on October 2, 2017 and February 27, 2018 in order to present the proposed Windfall Lake Project to the population. In 2018, Osisko Mining held focus groups and organized interviews with city representatives and local organizations. Since 2016, Osisko Mining met more than 20 times with Lebel-sur-Quévillon representatives and/or community members to share information about the proposed Windfall Lake Project including information on the on-going surface drilling activities and the bulk sampling project towards Lynx and Underdog.

A Collaboration Agreement was signed between Osisko Mining and the city of Lebel-sur-Quévillon in 2017. This collaborative process primarily aims to ensure transparency and effective communication with the host communities, to foster the social acceptability of the project, and to maximize the socioeconomic benefits of the project for Lebel-sur-Quévillon, all in a spirit of partnership.

As for Senneterre, Chapais and Chibougamau, even though the Windfall Lake Project is not on its territory, stakeholders felt that local entrepreneurs could benefit from business opportunities generated by the project.

As mentioned above, the tables in Appendix E summarize all meetings and information letters between Osisko Mining and municipalities or Aboriginal communities.

Osisko Mining has not yet spoken to the people of Miquelon and Desmaraisville, two hamlets between Lebel-sur-Quévillon and Waswanipi (Commission toponymie du Québec). Based on observations made by Osisko Mining employees during their travels, there appears to be little activity in these areas (closed gas station, snow not cleared in winter, etc.). In addition, no data are available for these two localities in the directory of the Ministère des Affaires municipales et Occupation du territoire du Québec.

As the project progresses, the communication and consultation plan will be adjusted by the Corporation based on input from stakeholders to engage both the Aboriginal and non-Aboriginal communities. The objectives of these activities will be to inform and consult the First Nations and the public on the project's activities, to address their concerns and to collect their comments.

12.0 PROJECT IMPLEMENTATION SCHEDULE

The following table presents the main steps in the project and the planned implementation periods. It is the latest and updated version of the bulk sampling activity schedule.

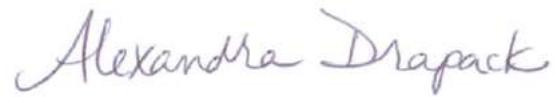

Table 6: Work schedule

WORK DESCRIPTION	SECTOR	START DATE	END DATE
Advancement of ramp to bulk location	Lynx	Fall 2018	September 2019
Bulk Sampling			September 2019
Transportation			October 2019
Processing		October 2019	November 2019
Advancement of ramp to bulk location	Top Portion Triple Lynx	*	March 2021
Bulk Sampling		March 2021	May 2021
Transportation		May 2021	June 2021
Processing			June 2021

13.0 NEXT STEPS AND RELATED PROJECTS

The Windfall Lake Feasibility Study will begin in the first quarter of 2020. The preliminary project information for the Windfall Lake mining project was sent to the MDDELCC in May 2017 and the guidelines on the scope of the impact study was received in August 2017. The project description was also sent to the Canadian Environmental Assessment Agency in early June 2017 and the need for an environmental assessment (EA) was confirmed on July 31, 2017. However, on August 28, 2019, the Impact Assessment Act, came into force creating the new Impact Assessment Agency of Canada and repealing the Canadian Environmental Assessment Act, 2012. The new Impact Assessment Act included an update of the tonnage trigger for a gold mine from 600 tpd to 5000 tpd and as a result, the Windfall Lake Project is no longer subjected to a federal EA. Osisko Mining began gathering environmental baseline data in early 2015 and continued in 2016, 2017, 2018 and 2019. The data collection and impact study mandates were awarded to the consulting firm of WSP. The environmental impact study will be submitted a couple of months after the end of the Feasibility Study.

APPENDIX A – RESOLUTION OF THE BOARD OF DIRECTORS

**RÉSOLUTION ÉCRITE DES ADMINISTRATEURS
MINIÈRE OSIKO INC. (la « Société »)**

**WRITTEN RESOLUTION OF THE DIRECTORS OF
OSIKO MINING INC. (the "Corporation")**

DEMANDE D'UN CERTIFICAT D'AUTORISATION OU DE TOUT AUTRE TYPE D'AUTORISATION AUPRÈS DU MINISTÈRE DE L'ÉNERGIE ET DES RESSOURCES NATURELLES ET/OU AUPRÈS DU MINISTÈRE DE L'ENVIRONNEMENT ET LUTTE CONTRE LES CHANGEMENTS CLIMATIQUES

REQUEST OF A CERTIFICATE OF AUTHORIZATION OR ANY TYPE OF AUTHORIZATION FROM THE MINISTÈRE DE L'ÉNERGIE ET DES RESSOURCES NATURELLES AND/OR FROM THE MINISTÈRE DE L'ENVIRONNEMENT ET LUTTE CONTRE LES CHANGEMENTS CLIMATIQUES.

ATTENDU QUE la Société a besoin de permis et d'autorisations pour accomplir ses activités.

WHEREAS the Corporation needs permits and authorizations to carry out activities.

PAR CONSÉQUENT IL EST RÉSOLU d'autoriser Alexandra Drapack et Andrée Drolet à agir au nom de la Société et de signer toute demande de certification d'autorisation ou toute autre demande d'autorisation ou de permis auprès du Ministère de l'Énergie et des Ressources naturelles et/ou auprès du Ministère de l'Environnement et Lutte contre les changements climatiques.

NOW THEREFORE IT IS HEREBY RESOLVED THAT Alexandra Drapack and Andrée Drolet are authorized to act on the behalf of the Corporation to sign any request for certificate of authorization or any request for authorization or permits from the Ministère de l'Énergie et des Ressources naturelles and/or the Ministère de l'Environnement et Lutte contre les changements climatiques.

VALIDITÉ

Une résolution écrite signés par tous les administrateurs habiles à voter sur cette résolution lors des réunions du conseil d'administration ou des comités exécutifs a la même valeur que si elle avait été adoptée lors d'une de ces réunions.

VALIDITY

A written resolution signed by all the directors entitled to vote on that resolution during Board of directors meetings or executives committees is as valid if it had been passed at such meeting.

**APPENDIX B – WINDFALL LAKE AND OSBORNE-BELL RESOURCE ESTIMATE NOTES AND
UPDATED LYNX ZONE RESOURCE ESTIMATE NOTES**

DISCLOSURE CONCERNING TECHNICAL INFORMATION

Updated Lynx Zone Resource Estimate Notes:

1. The independent “qualified person”, as defined by NI 43 101, are Judith St-Laurent, P. Geo, of InnovExplo Inc. and Charley Murahwi, P.Geo, M. Sc, FAusIMM of Micon International Limited. The effective date of the Windfall Resource Estimate is May 14, 2018. The effective date of the updated Lynx Zone Estimate is November 27, 2018.
2. The Windfall Resource Estimate and the Lynx Zone Resource Estimate are compliant with CIM standards and guidelines for reporting mineral resources and reserves.
3. Resources are presented undiluted and in situ and are considered to have reasonable prospects for eventual economic extraction.
4. The mineral resource estimates encompass a total of 126 tabular, subvertical gold-bearing domains each defined by individual wireframes with a minimum true thickness of 2.0 m.
5. Samples were composited within the mineralization domains into 2.0 m length composites. A value of zero grade was applied in cases of core not assayed.
6. High grade capping was done on composite data, and established using a statistical analysis on a per-zone basis for gold. Capping varied from 15 g/t Au to 75 g/t Au and was applied using a four-step capping strategy where capping values decreased as interpolation distances increased.
7. Density values were applied on the following lithological basis (t/m³): mafic volcanic host rocks varied from 2.78 to 2.86; felsic volcanic host rocks varied from 2.76 to 2.77; porphyries varied from 2.70 to 2.83.
8. Ordinary Kriging (OK) based interpolation was used for the estimation of all zones of the Windfall Lake gold deposit except for the Underdog zone where an Inverse Distance Squared (ID2) interpolation was preferred due to the larger drill spacing and smaller density of drill holes informing the mineralization wireframes. All estimates are based on a block dimension of 5 m NE, 2 m NW and 5 m height and estimation parameters determined by variography.
9. Estimates use metric units (metres, tonnes and g/t). Metal contents are presented in troy ounces (metric tonne x grade / 31.10348).
10. Neither InnovExplo Inc. nor Micon International Limited are aware of any known environmental, permitting, legal, title-related, taxation, socio-political or marketing issues, or any other relevant issue not reported in the technical report that could materially affect the mineral resource estimate.
11. These mineral resources are not mineral reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred resources in this mineral resource estimate are uncertain in nature and there has been insufficient exploration to define these Inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to these categories.
12. The number of metric tonnes and ounces was rounded to the nearest thousand. Any discrepancies in the totals are due to rounding effects; rounding followed the recommendations in Form 43 101F1.
13. Information relating to the updated mineral resource estimate for Lynx is supported by the press release titled “Osisko releases Mineral Resource Update for Lynx” dated of November 27,

2018 with an effective date of November 27, 2018 which is available on SEDAR (www.sedar.com) under Osisko's issuer profile.

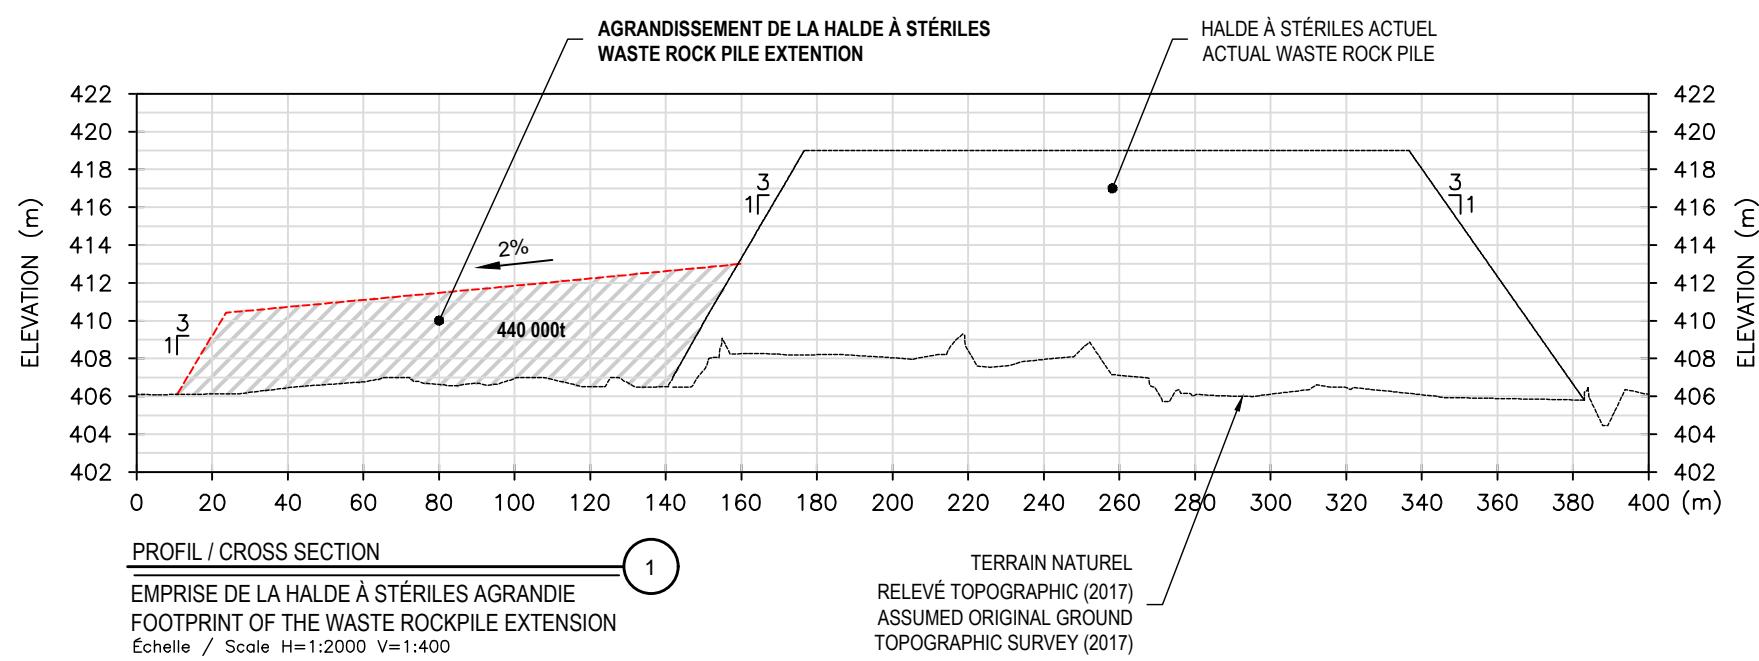

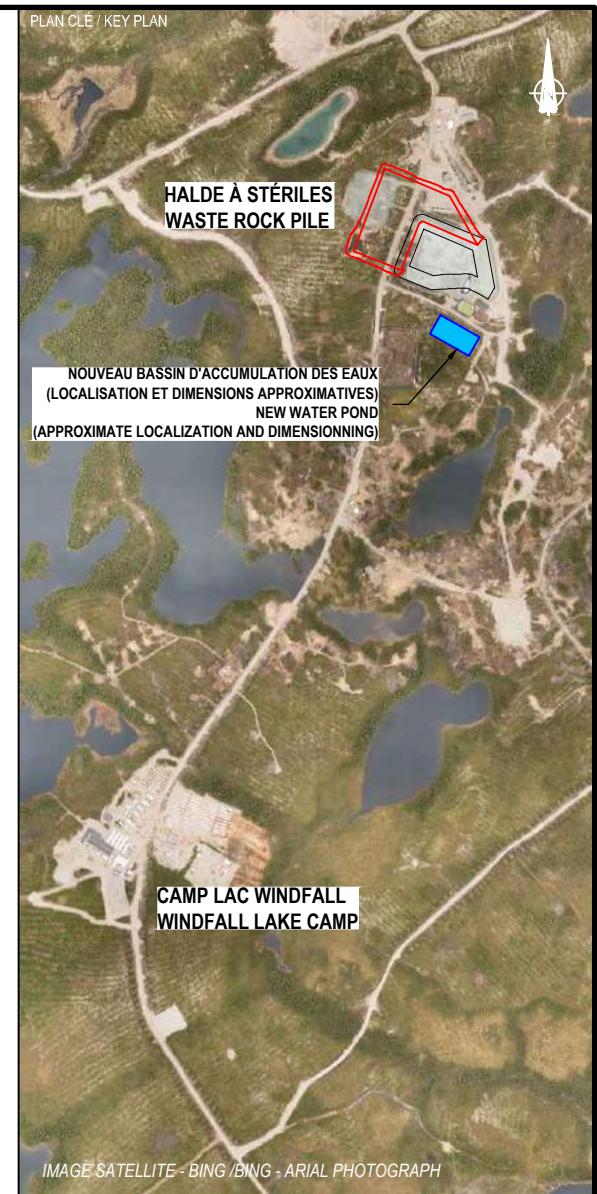

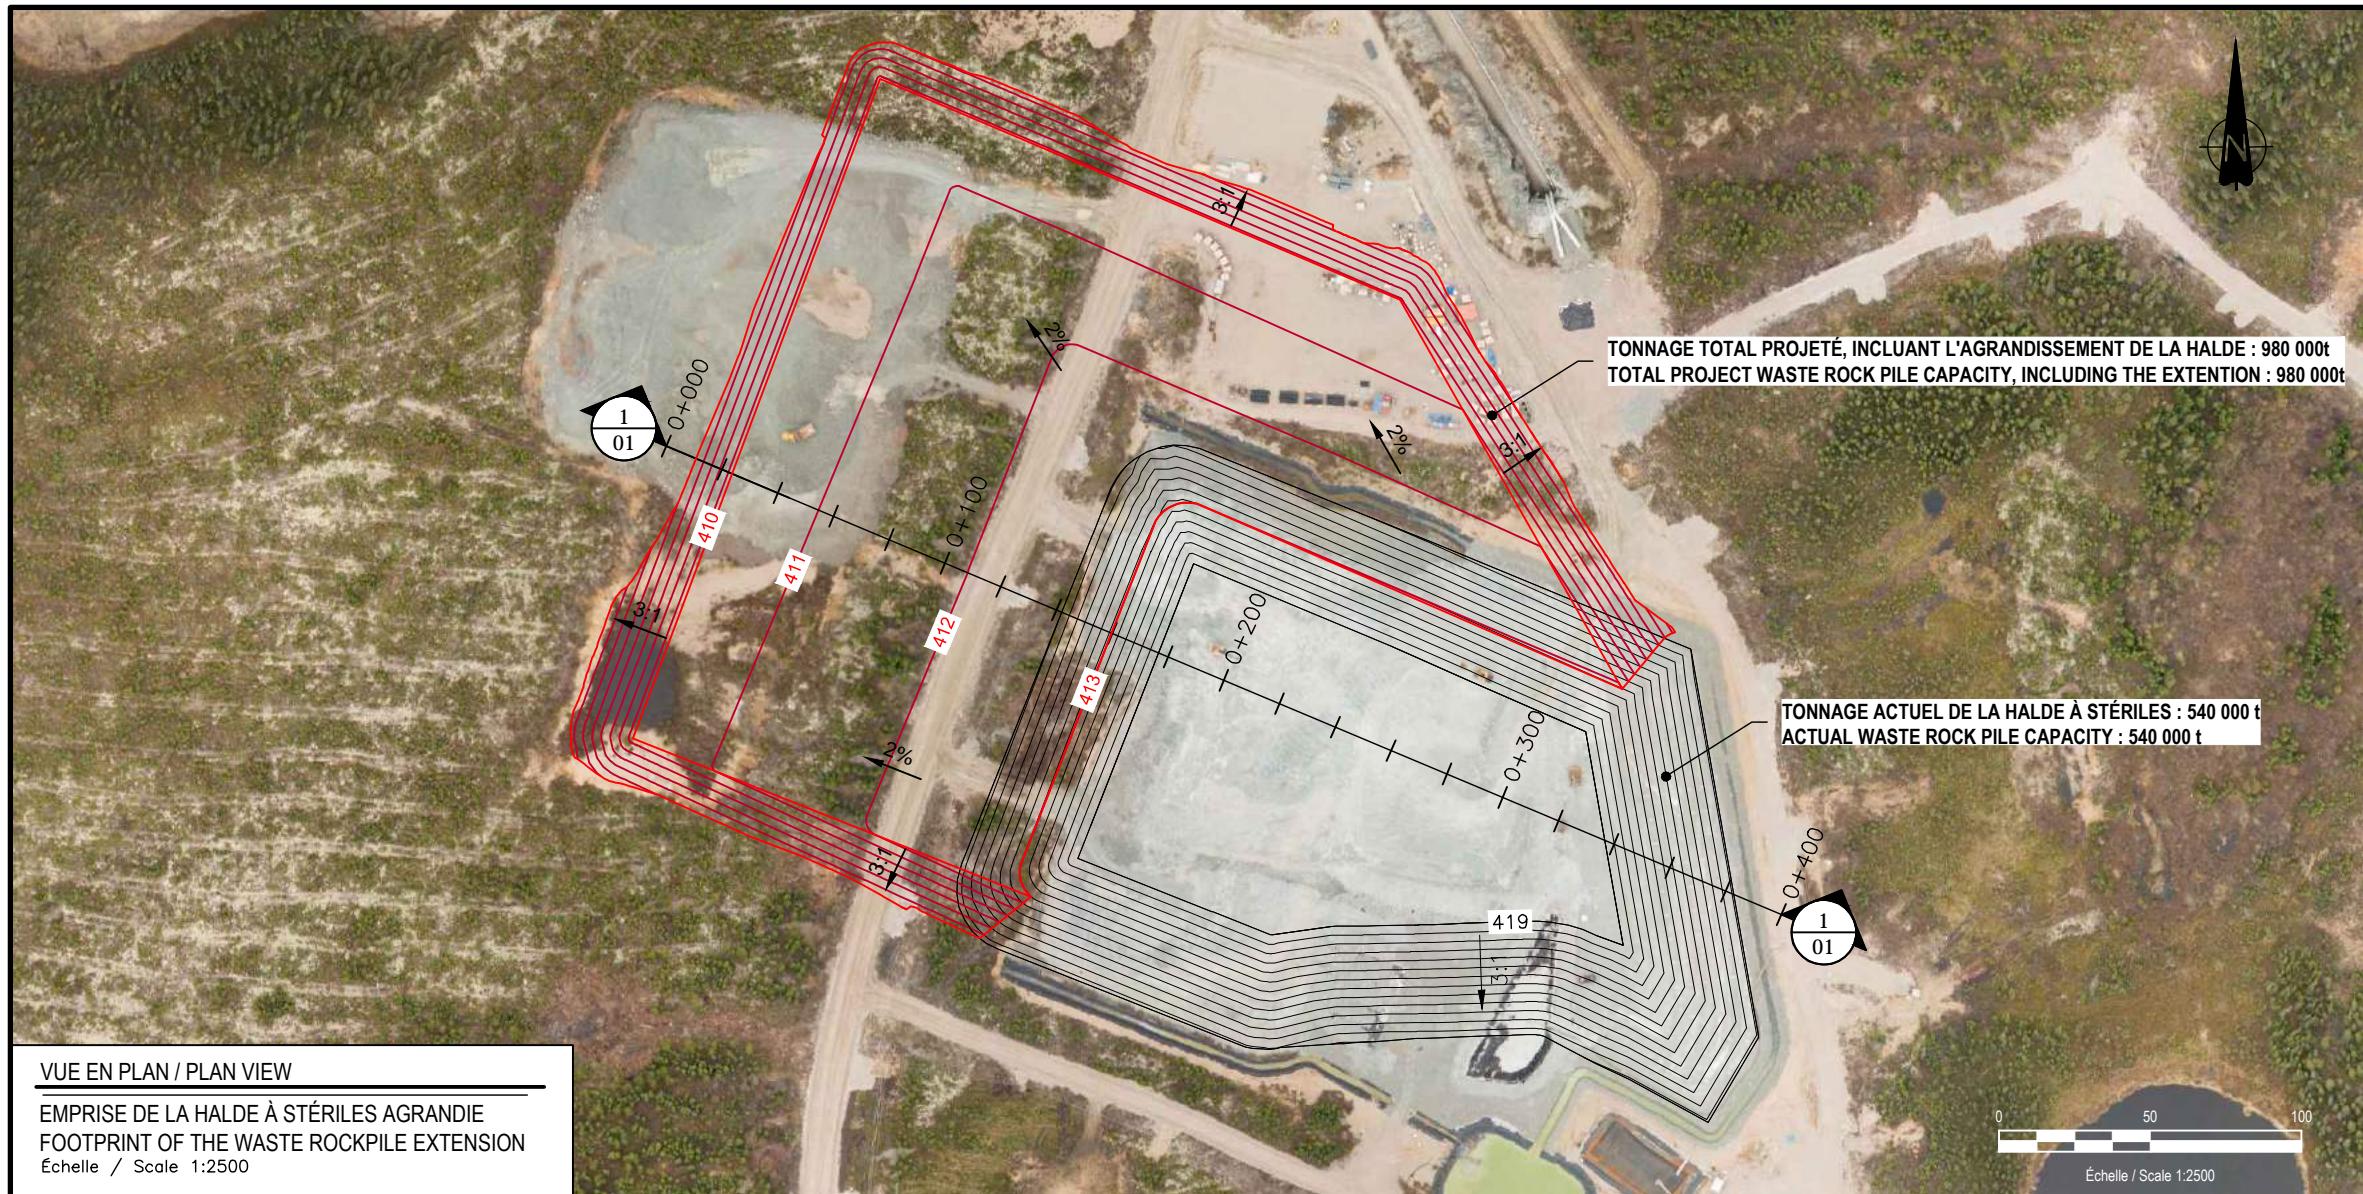

Windfall Lake Resource Estimate Notes:

1. The independent "qualified person" of the 2018 MRE, as defined by NI 43 101, is Judith St-Laurent, P. Geo, of InnovExplo Inc. The effective date of the estimate is May 14, 2018.
2. The Windfall Lake mineral resource estimate is compliant with CIM standards and guidelines for reporting mineral resources and reserves.
3. Resources are presented undiluted and in situ and are considered to have reasonable prospects for eventual economic extraction.
4. The mineral resource estimate encompasses a total of 124 tabular, subvertical gold-bearing domains each defined by individual wireframes with a minimum true thickness of 2.0 m.
5. Samples were composited within the mineralization domains into 2.0 m length composites. A value of zero grade was applied in cases of core not assayed.
6. High grade capping was done on composite data, and established using a statistical analysis on a per-zone basis for gold. Capping varied from 15 g/t Au to 75 g/t Au and was applied using a four-step capping strategy where capping values decreased as interpolation distances increased.
7. Density values were applied on the following lithological basis (t/m³): mafic volcanic host rocks varied from 2.78 to 2.86; felsic volcanic host rocks varied from 2.76 to 2.77; porphyries varied from 2.70 to 2.83.
8. Ordinary Kriging (OK) based interpolation was used for the estimation of all zones of the Windfall Lake gold deposit except for the Underdog Zone where an Inverse Distance Squared (ID2) interpolation was preferred due to the larger drill spacing and smaller density of drill holes informing the mineralization wireframes. All estimates are based on a block dimension of 5 m NE, 2 m NW and 5 m height and estimation parameters determined by variography.
9. Estimates use metric units (metres, tonnes and g/t). Metal contents are presented in troy ounces (metric tonne x grade / 31.10348).
10. InnovExplo is not aware of any known environmental, permitting, legal, title-related, taxation, socio-political or marketing issues, or any other relevant issue not reported in the technical report, that could materially affect the mineral resource estimate.
11. These mineral resources are not mineral reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred resources in this mineral resource estimate are uncertain in nature and there has been insufficient exploration to define these Inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to these categories.
12. The number of metric tonnes and ounces was rounded to the nearest thousand. Any discrepancies in the totals are due to rounding effects; rounding followed the recommendations in Form 43 101F1.
13. Information relating to the Windfall Project mineral resource estimate is supported by the technical report titled "Technical Report and Mineral Resource Estimate – Windfall Lake Project, Windfall Lake and Urban-Barry Properties" dated of June 12, 2018 with an effective date of May 14, 2018 which is available on SEDAR (www.sedar.com) under Osisko's issuer profile.

Osborne-Bell Resource Estimate Notes:

1. Resources are presented undiluted and in situ and are considered to have reasonable prospects for economic extraction.
2. The estimate encompasses nine tabular gold-bearing zones each defined by individual wireframes with a minimum true thickness of 2 metres.
3. High grade capping was done on composite data and established on a per zone basis for gold. It varies from 25 g/t Au to 55 g/t Au.
4. Density values were applied on the following lithological basis (g/cm3): volcanic host rocks = 2.80; late barren dykes and Beehler stock = 2.78; Zebra felsic unit = 2.72.
5. Grade model resource estimation was evaluated from drill hole data using an Ordinary Kriging interpolation method on a block model using a block size of 2.5 metres x 2.5 metres x 2.5 metres.
6. The mineral resources presented herein are categorized as inferred. The inferred category is only defined within the areas where drill spacing is less than 100 metres and shows reasonable geological and grade continuity.
7. The resource was estimated using Geovia GEMS 6.8. The estimate is based on 931 surface diamond drill holes. A minimum true thickness of 2.0 metres was applied, using the grade of the adjacent material when assayed, or a value of zero when not assayed.
8. Estimates use metric units (metres, tonnes and g/t). Metal contents are presented in troy ounces (metric tonne x grade / 31.10348).
9. The number of metric tonnes was rounded to the nearest thousand. Any discrepancies in the totals are due to rounding errors.
10. InnovExploration is not aware of any known environmental, permitting, legal, title-related, taxation, socio-political or marketing issues, or any other relevant issue not reported in the Technical Report that could materially affect the Mineral Resource Estimate.
11. These mineral resources are not mineral reserves as they do not have demonstrated economic viability. The quantity and grade of reported Inferred resources in this Mineral Resource Estimate are uncertain in nature and there has been insufficient exploration to define these Inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to these categories.
12. The number of ounces was rounded to the nearest thousand. Any discrepancies in the totals are due to rounding errors.
13. Information relating to the Quévillon Osborne-Bell Project is supported by the technical report titled "Technical Report and Mineral Resource Estimate – Osborne-Bell Gold Deposit, Quévillon Property" dated of April 23, 2018 with an effective date of March 2, 2018 which is available on SEDAR (www.sedar.com) under Osisko's issuer profile.

Subject: Letter of support – Osisko Mining – Advancement of Exploration Ramp - Windfall Lake Project

Dear Ms. Drapack,

This letter is to provide the Cree First Nation of Waswanipi's (CFNW) support to Osisko Mining Inc. (OMI) for the advancement of their exploration ramp toward the top portion of the Triple Lynx sectors at the Windfall Lake Project.

The CFNW respects the role of the Custodian in representing the land users of our community. As encouraged by us, OMI met with Mr. Marshall Icebound (trapline W25B) on October 23, 2019, to present the details of this project. Also in attendance were the Chief, Deputy Chief and the CFNW Mining Liaison coordinator. The presentation of the information was incorporated into the monthly Windfall Lake Environmental Monitoring Committee meeting which the Custodian agreed to; the format that is recognized as the preferred method of consultation with the Custodian. A second meeting was held with the Custodian and consultation committee on November 12, 2019 to further discuss the details of the project.

The CFNW is eager to have our community members continue to work at the Windfall Lake site and we recognize advancing the exploration ramp provides a unique opportunity to continue to train workers from the CFNW for jobs that will be sustainable throughout the exploration and operations phases of the project, when the feasibility study is complete.

Regards,

Chief Marcel Happyjack
Cree First Nation of Waswanipi

c.c. Jonathan Sutherland, Director General CFNW
Deputy & Council, CFNW

Activités de communication avec la communauté de Waswanipi

Date	Objectif	Localisation	Détails
2019-11-12	Discussion sur l'échantillonnage en vrac et sur le processus de consultation.	Waswanipi	Ronnie Ottreyes, Deputy-Chief, Waswanipi; Marshall Icebound, Tallyman W25B, Waswanipi; Judy Trapper, Trapline W25B, Waswanipi; Steven Blacksmith, Director Natural Resources, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi Johnny Cooper, Local Environment Advisor, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining; Danny Happyjack, Waswanipi Community Liaison Advisor, Osisko Mining; Eva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining.
2019-10-29	Discussion sur les sites de forage et les préoccupations du tallyman	Val-d'Or	Ronnie Ottreyes, Deputy-Chief, Waswanipi; Marshall Icebound, Tallyman W25B, Waswanipi; Judy Trapper, Trapline W25B, Waswanipi; Allan Saganash, Forestry Consultation Expert, Waswanipi Steven Blacksmith, Director Natural Resources, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining; Eva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining.
2019-10-23	Quatrième rencontre du comité de suivi environnemental du projet Windfall et discussion sur l'échantillon en vrac	Montréal	Marcel Happyjack, Chief, Waswanipi; Ronnie Ottreyes, Deputy-Chief, Waswanipi; Marshall Icebound, Tallyman W25B, Waswanipi; Judy Trapper Trapline W25B, Waswanipi; Gary Cooper, Tallyman W25A, Waswanipi; Josiah Cooper, Trapline W25A, Waswanipi; Joshua Blacksmith, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining; Andrée Drolet, Environment Director, Osisko Mining;

			Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining.
2019-10-24	Mise à jour sur les services de Miyuu Kaa	Montréal	John Kitchen, Miyuu Kaa Simon Britt, Bleureal (consultant to Miyuu Kaa) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Don Njegovan, VP Technical Services and Corporate Development, Osisko Mining Mathieu Savard, VP Exploration Quebec, Osisko Mining; Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining.
2019-09-25	Tenue d'un kiosque lors de la journée carrière de Mistissini	Mistissini	Cynthia Lachapelle, Surintendante Ressources humaines, Minière Osisko Chantal Girard, Conseillère en ressources humaines, Minière Osisko Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining
2019-09-17	Troisième rencontre du comité de suivi environnemental du projet Windfall	Windfall	Judy Trapper, Family member Trapline W25B, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi Allan Happyjack, Cree Trappers' Association President, Waswanipi Johnny Awashish, Cree Trappers' Association, Waswanipi Johnny Saganash, Cree Trappers' Association, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Andrée Drolet, Environmental Director, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2019-09-04	Présentation à l'assemblée générale de Waswanipi	Waswanipi	Chief and Council Waswanipi community members (approximately 125 people) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining

2019-08-14	Deuxième rencontre du comité de suivi environnemental du projet Windfall	Windfall	Judy Trapper, Family member Trapline W25B, Waswanipi Willie Icebound, Family member Trapline W25B, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi (phone) Christian Bonhomme, Senior Environmental Technician, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining (phone)
2019-07-16	Première rencontre du comité de suivi environnemental du projet Windfall	Windfall	Judy Trapper, Family member Trapline W25B, Waswanipi Ronnie Ottreyes, Deputy-Chief, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Christian Bonhomme, Senior Environmental Technician, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2019-07-10	Présentation sur les besoins futurs en emplois et formation pour le projet Windfall	Montreal	Représentants des communautés cris, Apatisiwin Skills Development Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Eva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2019-06-26	Festivités pour la fête des peuples autochtones	Windfall	Danseurs et drummers; Ronnie Ottreyes (Waswanipi Deputy Chief); Roderick Happyjack (Waswanipi Natural Resources); John Kitchen (Miyuu Kaa); Joshua Blacksmith (Waswanipi Mining Coordinator);
2019-05-28	Visite du site Windfall avec des étudiants du secondaire de Waswanipi	Windfall	12 étudiants de secondaire 4 3 accompagnateurs Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining

2019-05-22	Mise à jour sur le programme de forage Windfall	Waswanipi	Marcel Happyjack, Chief, Waswanipi Ronnie Ottereyes, Deputy-Chief, Waswanipi Joshua Blacksmith, Mining Coordinator, Waswanipi Allan Happyjack, President, Local CTA, Waswanipi Allan Cooper, Local CTA, Waswanipi Sidney Ottereyes, Local CTA, Waswanipi Judy Trapper, Willie Icebound, Allan Icebound: W25B Michel Aras, Forestry Coordinator Waswanipi (telephone) Allan Saganash, Forestry department (telephone) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Eva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining
2019-04-23	Présentation des services de construction de Miyuu Kaa	Val-d'Or	John Kitchen, Miyuu Kaa Simon Britt, Bleureal (consultant to Miyuu Kaa) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Don Njegovan, VP Technical Services and Corporate Development, Osisko Mining
2019-04-10	Présentation à l'assemblée générale de Waswanipi	Waswanipi	Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Jack Blacksmith, IBA Negotiator, Waswanipi Allan Cooper, Translator, Waswanipi Danny Happyjack, Waswanipi Community Liaison Officer, Osisko Mining Il y avait approximativement 190 personnes
2019-04-03	Visite du site Windfall – Cégep de Chibougamau	Windfall	Étudiants du Cégep de Chibougamau (AEC technique en géologie) Danny Happyjack, Agent de liaison communautaire, Osisko Mining Ian Oblin, Facilitateur ressources humaines pour les cris, Osisko Mining Annie-Pier Maltais, Géologue, Osisko Gold Royalties Pier-Carl Chouinard, Superviseur carothèque, Osisko Mining Frédéric Hamel, Géologue, Osisko Mining Clarisse Deschênes-Rancourt, Technicienne Senior Environnement, Osisko Mining

			Patrick Ottereyes, Opérateur du traitement de l'eau, Osisko Mining
2019-03-23	Présentation à l'école secondaire de Waswanipi	Waswanipi	Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining 28 étudiants (sec 4 & 5) Michel Branchaud, professeur
2019-02-19	Ligne de trappe W25B : savoir traditionnel sur le caribou, l'orignal, le loup et l'ours	Windfall	Marshall Icebound: W25B Judy Trapper: W25B Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Andrée Drolet, Environmental Director, Osisko Mining
2019-02-19	Visite en hélicoptère et présentation du programme de forage du secteur Macho	Windfall	Josiah Cooper: W25A Willie Icebound: W25B William Dixon: W26 Steven Blacksmith, Director Natural Resources, Waswanipi (telephone) Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining (telephone) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Pascal Simard, Exploration Manager Northern Quebec, Osisko Mining Simon Tremblay-Hébert, Project Geologist, Urban Barry Project, Osisko Mining Gino Collard, MWO, Canadian Armed Forces (guest/observer)
2019-02-05	Mise à jour des activités à Windfall et présentation des services de Miyuu Kaa	Montreal	Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Simon Britt, Miyuu Kaa John Kitchen Miyuu Kaa
2019-01-21 2019-04-15 2019-01-14	Mise à jour sur l'exploration régionale et à Windfall	Lebel-sur-Quévillon	Gary Cooper, Josiah Cooper, Jericho Cooper: W25A; Marshall Icebound, Judy Trapper: W25B William and Sophie Dixon: W26 Steven Blacksmith, Director Natural Resources, Waswanipi (telephone) Michel Aras, Forestry Coordinator Waswanipi (telephone) Danny Happyjack, Waswanipi Liaison Advisor, Osisko Mining

			Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Pascal Simard, Exploration Manager Northern Quebec, Osisko Mining
2018-11-21	Seconde rencontre du comité d'implémentation	Ottawa	Ronnie Ottereyes, Deputy Chief, Waswanipi Isaac Iserhoff, Department of Commerce and Industry, Cree Nation Government Guest: Jackie Barney, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Andrée Drolet, Environmental Director, Osisko Mining
2018-10-17 et 2018-10-18	Invitation au congrès XPLOR	Montreal	Marshall Icebound, Tallyman W25B, Waswanipi Judy Trapper, Conjointe de Marshall Icebound Gary Cooper, Tallyman W25A, Waswanipi
2018-10-01	Visite du site des installations de gestion environnementale	Windfall	Marshall Icebound, Tallyman W25B, Waswanipi Judy Trapper, Conjointe de Marshall Icebound Mathieu Savard, VP Exploration, Minière Osisko Don Njegoven, VP Développement des affaires, Minière Osisko Christian Bonhomme, Technicien en environnement senior, Minière Osisko
2018-09-12	Visite souterraine par les représentants de Waswanipi	Windfall	Marcel Happyjack, Chief, Cree First Nation of Waswanipi Jenny Cooper-Happyjack, Chief's wife, Waswanipi Ronnie Ottereyes, Deputy-Chief, Cree First Nation of Waswanipi Tina Mark-Ottereyes, Deputy-Chief's wife, Waswanipi Marshall Icebound, Tallyman W25B, Waswanipi Judy Trapper, Tallyman's wife, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Cynthia Lachapelle, HR Superintendent, Osisko Mining Chantal Girard, HR Advisor, Osisko Mining Ian Oblin, First Nation Human Resources Facilitator, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining Danny Happyjack, Waswanipi Community Liaison Advisor, Osisko Mining

			Guillaume-Guy Lamontagne, Mining Engineer, Osisko Mining Éric Gilbert, Mining Technician, Osisko Mining Isabelle Roy, Senior Project Geologist, Osisko Mining
2018-08-28	Visite du site Windfall par le Conseil Cri de la santé et des services sociaux de la Baie James	Windfall	Paul Meillon, Conseil Cri de la santé Reggie Tomatak, CBHSSJB réseau public de la santé Marie-Jo Ouimet, Conseil Cri de la santé Christian Racine, Infirmier, Osisko Mining Donald Gingras, Surintendant Santé et Sécurité, Osisko Mining Clarisse Deschesnes-Rancours, Technicienne en environnement, Osisko Mining Liliana Ganta, Santé et sécurité, Osisko Mining
2018-07-23 & 2018-07-24	Cinquième rencontre pour la négociation d'une ERA	Waswanipi Old Post	Jonathan Sutherland, Negotiator, Waswanipi Naomie Awashis, Negotiator, Waswanipi Jack Blacksmith, Negotiator, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Matthew Ottreyes Sr. Waswanipi Johnny Saganash, Waswanipi Jerry Gull, Waswanipi Kevin Roussel, Cree Nation Government Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko Cynthia Lachapelle, Superintendante Ressources Humaines, Minière Osisko Ian Oblin, Human Resources First Nations Facilitator, Minière Osisko
2018-07-16 & 2018-07-17 & 2018-07-18	Présentation du projet et récolter des données de base pour l'étude environnementale et sociale Entrevues avec les tallymen concernés par le projet	Waswanipi	Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko Karine Neumann, Anthropologue, WSP
2018-07-04	Visite du Vocational School Center	Waswanipi	Cynthia Lachapelle, Surintendante en Ressources Humaines, Minière Osisko Chantal Girard, Conseillère aux ressources humaines, Minière Osisko

			Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko
2018-07-03	Présentation à l'assemblée générale de Waswanipi. Mise à jour du projet Statistiques d'emplois Estimation de ressource	Waswanipi	Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko Environ 100 personnes étaient présentes
2018-06-21	Visite du site Windfall Camp et infrastructures de surface Tour d'hélicoptère Festivités pour la fête des peuples autochtones	Windfall	Mandy Gull, Deputy Grand Chief, Cree Nation Government Naomie Awashis, Negotiator, Waswanipi Jack Blacksmith, Negotiator, Waswanipi Ronnie Ottreyes, Deputy Chief, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Roderick Happyjack, Natural Resources, Waswanipi Harry Shecapio, Tallyman Lot 17, Waswanipi Kathleen Moore, Economic Department, Waswanipi Adario Masty Esquay Masty Sekhoya Simard Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko
2018-06-18 & 2018-06-19 & 2018-06-20	Présentation du projet et récolter des données de base pour l'étude environnementale et sociale Groupes de discussions Entrevues avec divers acteurs de la communauté (départements du conseil de bande, clinique, écoles, entrepreneurs, tallyman, etc.)	Waswanipi	Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko Karine Neumann, Anthropologue, WSP
2018-06-11 & 2018-06-12	Quatrième rencontre pour la négociation d'une ERA	Montreal	Jonathan Sutherland, Negotiator, Waswanipi Naomie Awashis, Negotiator, Waswanipi Jack Blacksmith, Negotiator, Waswanipi

			Ronnie Ottereyes, Deputy Chief, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Andy Baribeau, Cree Nation Government Kevin Roussel, Cree Nation Government Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable séniior, Minière Osisko
2018-05-24 & 2018-05-25	Troisième rencontre pour la négociation d'une ERA	Waswanipi	Jonathan Sutherland, Negotiator, Waswanipi Naomie Awashis, Negotiator, Waswanipi Jack Blacksmith, Negotiator, Waswanipi Ronnie Ottereyes, Deputy Chief, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Andy Baribeau, Cree Nation Government Kevin Roussel, Cree Nation Government Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable séniior, Minière Osisko
2018-04-24	Deuxième rencontre pour la négociation d'une ERA	Montreal	Ronnie Ottereyes, Deputy Chief, Waswanipi Jack Blacksmith, Negotiator, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Andy Baribeau, Cree Nation Government Kevin Roussel, Cree Nation Government Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable séniior, Minière Osisko
2018-04-23	First Implementation Committee meeting	Montreal	Ronnie Ottereyes, Deputy Chief, Waswanipi Steven Blacksmith, Director of Natural resources, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining

2018-04-04	Mise à jour sur le projet Windfall Réorganisation de la campagne de forage Prochaines étapes	Mont Tremblant	Ronnie Ottreyes, Deputy Chief, Waswanipi Marlene I. Kitchen, Councillor, Waswanipi Andy Metabie, Councillor, Waswanipi Michael Grant, Councillor, Waswanipi Marcel Martin, Councillor, Waswanipi Jack Blacksmith, IBA Negotiator, Waswanipi Jonathan Sutherland, Director General, Waswanipi Laurie Neeposh, Treasurer, Waswanipi Cheyenne Gull, Corporate Secretary, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2018-03-05	Mise à jour sur le projet Windfall et révision de l'entente d'exploration avancée	Toronto	Marcel Happyjack, Chief, Waswanipi Ronnie Ottreyes, Deputy Chief, Waswanipi Marlene I. Kitchen, Councillor, Waswanipi Eli Moore, Attaché to the Chief, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Andy Baribeau, Director - Department of Commerce & Industry, Cree Nation Government Mandy Gull, Deputy Grand Chief, Cree Nation Government Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2018-02-28	2eme Portes Ouvertes	Waswanipi	Présentation de l'évaluation des variantes et données de base environnementales à l'aide d'une vingtaine d'affiches. Présentation de la description de projet à l'aide d'une vidéo en cri. 43 personnes ont signé la feuille de présence 9 personnes ont remplis le formulaire de commentaires Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Cynthia Lachapelle, Superintendante Ressources humaines, Minière Osisko Andrée Drolet, Directrice Environnement, Minière Osisko, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable

			Betsy Shecapio, Commis à l'accueil, Minière Osisko
2018-02-26	Chasse et condition de travail	Windfall	Marshall Icebound, Tallyman W25B, Waswanipi Judy Trapper, Wife of Tallyman W25B, Waswanipi Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Development Coordinator, Osisko Mining
2018-01-25	Mise-à-jour sur les travaux régionaux	Lebel-sur-Quévillon	Marshall Icebound, Tallyman W25B, Waswanipi Judy Trapper, Tallyman's wife, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi (telephone) Alix Drapack, VP Environmental Services and Sustainable Development, Osisko Mining Pascal Simard, Exploration Manager Northern Quebec, Osisko Mining Èva Roy-Vigneault, Senior Sustainable Environment Coordinator, Osisko Mining
2018-01-09	Présentation à l'assemblée générale de la communauté de Waswanipi	Waswanipi	Présentation sur le projet Windfall et du vidéo en version cri. Environ une centaine de personnes étaient présentes. Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko
2017-12-19	Première rencontre pour la négociation d'une ERA	Waswanipi	Marcel Happyjack, Chief, Waswanipi Marlene I Kitchen, Conseiller, Waswanipi Jonathan Sutherland, Negotiator, Waswanipi Naomie Awashis, Negotiator, Waswanipi Jack Blacksmith, Negotiator, Waswanipi Joe Weistche, Elder, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Andy Baribeau, Cree Nation Government Jean-Paul Murdoch, Cree Nation Government Kevin Roussel, Cree Nation Government Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable senior, Minière Osisko

2017-12-18	Rencontre avec Harry Grant utilisateur du territoire W25B Discussions sur les travaux réalisés et à venir	Waswanipi	Harry Grant, utilisateur du territoire, Trapline W25B, Waswanipi Judy Trapper, conjointe du tallyman Marshall Icebound, Trapline W25B, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Johnny Cooper, Traducteur, Waswanipi Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Mathieu Savard, VP Exploration, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable sénior, Minière Osisko
2017-11-16	Discussion sur la négociation et la révision de l'étude d'impact	Waswanipi	Marcel Happyjack, Chief, Waswanipi Jonathan Sutherland, Director General, Waswanipi Eli Moore, Political Attaché to the Chief, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko
2017-11-15	Discussions sur les travaux réalisés et à venir	Windfall	Steven Blacksmith, Director of Natural resources, Waswanipi Jackie Barney, Mining Coordinator, Waswanipi Marshall Icebound and Judy Trapper, Tallyman W25B, Waswanipi Lucas DelVecchio, CNG Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko
2017-11-02	1ères Portes Ouvertes	Waswanipi	Présentation de la description de projet à l'aide d'une vingtaine d'affiches et d'une vidéo. 87 personnes ont signé la feuille de présence 9 personnes ont remplis le formulaire de commentaires Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko Cynthia Lachapelle, Superintendante Ressources humaines, Minière Osisko Andrée Drolet, Directrice Environnement, Minière Osisko, Minière Osisko

			<p>Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko</p> <p>Betsy Shecapio, Waswanipi Community Liaison Advisor, Minière Osisko</p>
2017-11-02	Présentation à l'Assemblée régionale du CTA	Waswanipi	<p>Présentation sur le projet Windfall et du vidéo en version anglaise et traduit en cri.</p> <p>Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko</p> <p>Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko</p>
2017-10-26	Discussions sur la négociation d'une entente, les travailleurs cris et le processus d'évaluation environnemental	Montreal	<p>Marcel Happyjack, Chief, Waswanipi</p> <p>Jonathan Sutherland, Director General, Waswanipi</p> <p>Marlene I Kitchen, Councillor, Waswanipi</p> <p>Eli Moore, Political Attaché to the Chief, Waswanipi</p> <p>Gillman Ottereyes</p> <p>Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko</p> <p>Mathieu Savard, VP Exploration Québec, Minière Osisko</p>
2017-10-18	Mise-à-jour sur le projet Windfall Lake et discussion sur les travailleurs cris au site	Montreal	<p>Marlene I Kitchen, Councillor, Waswanipi</p> <p>Steven Blacksmith, Director of Natural resources, Waswanipi</p> <p>Jackie Barney, Mining Coordinator, Waswanipi</p> <p>Alex Moses, President/CEO of Miyuu Kaa Corporation</p> <p>Marshall Icebound, Tallyman W25B, Waswanipi</p> <p>Judy Trapper, conjointe de Marshall Icebound</p> <p>Alix Drapack, VP Services environnementaux et développement durable, Minière Osisko</p> <p>Cynthia Lachapelle, Superintendante Ressources humaines, Minière Osisko</p> <p>Èva Roy-Vigneault, Coordonnatrice développement durable, Minière Osisko</p> <p>Betsy Shecapio, Waswanipi Community Liaison Advisor, Minière Osisko</p>
